

Affdex Lab — 2026 Monetization + Funding Plan (Lab-level)

Context - Affidex Lab audience is small today (X: ~186 followers; DecaFlow X: ~177). Plan cannot depend on content/virality. - Team strengths: smart contract deployment, basic audit/readiness, growth/BD. - Claimed delivery capacity: up to 15 concurrent client workstreams if demand exists. - Goal for 2026: profitability for the Lab (cashflow-first), then fundraise from a position of strength.

Operating principle - Sell outcomes you can control (delivery + execution), collect cash upfront, standardize scope. - Use the Lab as a venture studio + execution partner. Portfolio wins are upside, not the only engine.

1) Positioning (what Affidex Lab is)

One-line - “Affdex Lab is a Web3 + AI venture studio and execution partner that ships production smart contracts and growth/BD systems, and helps teams become fundable.”

What to avoid claiming (until true) - Avoid “we are a VC” or “we guarantee funding.” - Use: “venture studio + advisory + partner network + fundraising preparedness.”

Proof artifacts to lead with - DecaFlow shipped launch (publish a case study: timeline, what shipped, what outcomes). - 2 additional mini case studies (even small wins): deployment, integrations, growth outcomes.

2) Immediate revenue engines (Q1 priority)

Affdex Lab should sell only 3–4 offers to start. Too many offers slows sales.

Offer A — Protocol Readiness / Pre-Audit Sprint (10 business days)

Buyer - Teams going to mainnet/audit, or recently audited and need fixes.

Deliverables - Threat model + attack surface map - Invariants + assumptions list - Test plan improvements + priority test cases - Deployment checklist + environment hardening - Monitoring/alerts checklist (what to watch on-chain, what to alert on) - “Audit readiness backlog” (tickets + severity)

Pricing + terms - \$8,000–\$25,000 - 100% upfront (short, high value)

Success metrics - Reduced audit iterations - Deployment incidents avoided - Clear readiness scorecard delivered

Offer B — Launch Sprint (2 weeks)

Buyer - Teams launching testnet/mainnet or new protocol feature.

Deliverables - Launch narrative + positioning - Launch calendar (2 weeks) + daily execution checklist - Landing/docs polish plan (or deliver if in scope) - Community funnel: announcements, quests/points structure (lightweight) - Partner intro map (who to talk to + scripts)

Pricing + terms - \$5,000–\$12,000 - 80% upfront / 20% on delivery

Offer C — Growth/BD Retainer (3-month minimum)

Buyer - Teams with product but weak distribution; ecosystems/infra partners expanding into Africa.

Deliverables (pick 4–6 and standardize) - Weekly BD pipeline build + tracking - Partner outreach (targets + scripts + scheduling) - Ecosystem integrations coordination - Grant submissions (packages + reporting) - Launch ops for features/releases - Weekly founder call + priorities, next-week plan

Pricing + terms - \$3,000–\$10,000/month - 3-month minimum, monthly paid upfront

Offer D — Fundraising Prep (Advisory)

Primary version (recommended) - Upfront fee + fixed closing bonus (not %), to reduce regulatory/brokerage risk.

Deliverables (4–6 weeks) - Deck + narrative rewrite - Data room checklist + structure - Investor/partner target list (by thesis) - Outreach scripts + weekly KPI tracking - Pipeline review cadence

Pricing + terms - \$7,500–\$15,000 upfront - Optional: \$7,500 fixed closing bonus if raise closes in 120 days

Compliance note (non-legal) - In many jurisdictions, “% of funds raised” tied to introductions can trigger broker/dealer or intermediary rules. Prefer fixed advisory fees and/or fixed bonus; get local counsel for exact wording.

3) Distribution (how deals are won with a small audience)

Primary channel for Q1/Q2 - Targeted outbound + partner referrals (not content-driven growth).

Weekly minimum activity targets (non-negotiable) - Add 50 new qualified leads/week - Send 100 targeted outreach messages/week (X DMs + email + LinkedIn) - Book 10 discovery calls/week - Send 4 proposals/week - Close 1 deal/week (early target: 1 per 1–2 weeks, then ramp)

Sales pipeline stages 1) Prospect identified 2) First message sent 3) Response / qualification 4) Call booked 5) Diagnosis call completed 6) Proposal sent 7) Negotiation 8) Closed (paid)

Inbound acceleration (secondary) - Weekly founder office hours (lead gen) - Monthly workshop (sponsored or lead gen) - Publish 1 case study/month

4) Target customer segments (high probability, fast pay)

Segment 1 — Protocols pre-audit / pre-mainnet - Need readiness, risk reduction, credibility.

Segment 2 — Teams that raised pre-seed and must ship - Need speed + delivery certainty.

Segment 3 — Ecosystems (L1/L2/infra) with Africa expansion goals - Have budgets for dev onboarding, workshops, integrations, hackathons.

Segment 4 — Web2 fintechs testing blockchain rails - Bigger budgets; sell pilot “Readiness + Architecture + Deployment plan”.

5) Pricing strategy (increase fast, don’t undercharge)

Rules - Charge for speed + certainty, not hours. - Collect cash upfront. - Raise prices every 3–4 closes if win-rate stays high.

Suggested Q1 price floors - Pre-Audit Sprint: do not go below \$8k - Launch Sprint: do not go below \$5k - Retainer: do not go below \$3k/month

6) Operational capacity model (supporting up to 15 concurrent workstreams)

To avoid delivery failures, standardize roles per workstream - Engagement Lead (client comms + scope control) - Tech Lead (smart contract/deployment) - BD Operator (partner outreach + tracking) - QA/Reviewer (basic audit/readiness checks)

Delivery system - Kickoff doc (scope, exclusions, timelines, acceptance) - Daily internal standup - Weekly client update (scorecard + next week plan) - Post-engagement: case study + testimonial request

Quality gates (minimum) - Written threat model + assumptions list for any contract work - Test coverage baseline + deployment checklist signed - Monitoring checklist delivered

7) Sponsorships + ecosystem money (Lab-level non-dilutive funding)

Programs Affidex Lab can sell to chains/infra 1) “Affidex Build Week” (online, 5 days) - Goal: onboard devs, build integrations, ship demos. - Sponsor package: \$10k-\$50k

2) “University Web3+AI Tour” (local)

- Goal: developer acquisition for sponsor ecosystem.
- Sponsor package: \$5k-\$30k per city/campus

3) “Integration Sprint” (partner-specific)

- Goal: integrate sponsor SDK/oracle/indexer into 3-5 projects.
- Sponsor package: \$15k-\$80k

Sponsor KPIs - # developers onboarded - # projects integrated - # PRs merged / repos created - Workshop attendance + completion - Follow-on dev activity after 30 days

8) Grants positioning (funding for the Lab)

Grant narrative that wins - “Affidex Lab is a public-goods-oriented venture studio driving ecosystem adoption via open-source tooling, developer onboarding, and integrations.”

Grant-friendly outputs - Open-source templates: deployment scripts, monitoring dashboards, readiness checklists - SDK adapters/integration guides - Workshops + public reporting

Grant engine - Maintain a grant calendar; submit weekly - Reusable modules: impact, implementation plan, budget, KPIs, reporting schedule

9) Funding for Affidex Lab (equity + non-dilutive)

Best sequencing 1) Q1: build cashflow (MRR + upfront projects) 2) Q2: lock sponsor programs + grants 3) Q3: raise studio round (SAFE/convertible) from strength

What investors fund at Lab level - Predictable revenue (retainers + productized sprints) - Portfolio upside (studio terms: small equity/warrants in incubated teams) - Distribution advantage (partner network + repeatable pipeline)

Minimum “investment-ready” data room checklist - Studio deck - 12-month operating plan + budget - Revenue proof (contracts/invoices) - Case studies (DecaFlow + 2) - Standard studio terms (upfront fee + optional equity/warrants)

10) Q1 execution focus (what matters most)

Week 1–2 - Finalize 4 offers (scopes, pricing, terms) - Publish DecaFlow case study - Build 200-lead list (by segment)

Week 3–4 - Run outbound machine weekly - Close first 2 paid engagements - Start 1 retainer

Q1 outcome targets - \$10k–\$25k MRR by end of March - \$30k–\$80k total cash collected by end of March - 3 case studies total (including DecaFlow)
