

Affidex Lab — 2026 Monetization + Funding Plan (Simple, Executable)

Who this document is for

This document is written so that any team member (or external advisor) can pick it up and immediately understand: - how Affidex Lab (the Lab, not the products) makes money in 2026, - what we sell, to whom, and at what price, - how we get clients even with a small audience, - how we use revenue + proof to unlock grants/sponsorships and then investment.

Current reality (starting point)

- Audience today is small (Affidex Lab X ~186, DecaFlow X ~177). We will not rely on virality to get clients.
- Team strengths: smart contract deployment, basic audit/readiness, growth/BD.
- Capacity: can handle high volume (up to ~15 concurrent workstreams) if work is standardized and managed.

2026 goal

- Primary: profitability for Affidex Lab via predictable cashflow.
- Secondary: raise funding (non-dilutive first, then dilutive) from a position of strength.

1) The strategy in one page

Affidex Lab will run as a venture studio + execution partner using 3 money engines.

Engine 1 — Productized Sprints (fast cash) - Short engagements with fixed scope, fixed timeline, paid upfront. - Example: “Protocol Readiness / Pre-Audit Sprint”.

Engine 2 — Retainers (monthly stability) - 3-month minimum monthly retainers for BD + ecosystem + growth operations. - These create predictable MRR and allow planning.

Engine 3 — Sponsorships + Grants (Lab-level funding) - Chains/infra pay for outcomes: developer onboarding, integrations, workshops. - Grants pay for public goods outputs: open-source tooling, education, research.

Important rule - In 2026 we sell outcomes we control. - Portfolio products are upside, not the only revenue plan.

2) Glossary (simple definitions)

- MRR: Monthly Recurring Revenue (active retainers total per month).
 - Cash collected: money received in bank/wallet (the most important metric).
 - Productized sprint: fixed scope, fixed duration, fixed price. Not “consulting by the hour”.
 - Pre-audit / readiness: work that reduces security risk and speeds up audits.
 - Sponsor: chain/infra partner paying for ecosystem growth outcomes.
 - Data room: folder with legal + financial + traction docs used for fundraising.
-

3) What we sell (the 4 offers)

To stay focused, we sell only these 4 offers in Q1/Q2.

Offer A — Protocol Readiness / Pre-Audit Sprint (10 business days)

What this is - A short engagement to make a protocol safer to launch and easier to audit. - This is NOT a full professional audit. It is “audit readiness + risk reduction”.

Who it is for - Teams about to go to audit. - Teams that just got an audit report and need help fixing issues. - Teams preparing mainnet and want fewer surprises.

What the client receives (clear deliverables) 1) Threat model (what can go wrong and how) 2) Attack surface map (contracts, roles, upgradeability, admin keys, dependencies) 3) Invariants + assumptions list (what must always be true) 4) Test plan improvements (priority tests to add + what they prove) 5) Deployment readiness checklist (configs, permissions, timelocks, multisig, verification) 6) Monitoring & alerts checklist (what to track after launch) 7) “Readiness backlog” (tickets with severity + recommended fixes)

What we need from the client (inputs) - Repo access (or full contract files) - Existing tests (if any) - Deployment plan (chains, addresses, admin setup) - Any previous audit report (if exists)

Timeline (10 business days) - Day 1: kickoff + scope freeze + access - Day 2–5: review + threat model + invariants - Day 6–8: test plan + deployment checklist + monitoring plan - Day 9: backlog + risk scorecard - Day 10: delivery call + handover

Price + payment terms - \$8,000–\$25,000 depending on complexity - 100% upfront (because it is short and high value)

Acceptance criteria (how we know it is done) - Deliverables (1–7) delivered as a single package - Final handover call completed

Common upsells - “Audit Fix Sprint” (1–2 weeks) - Ongoing monitoring setup implementation

Offer B — Launch Sprint (2 weeks)

What this is - A 2-week execution sprint to launch a protocol feature/testnet/mainnet with credibility.

Who it is for - Teams launching anything public (testnet, mainnet, points campaign, new feature).

What the client receives 1) Launch narrative (what we are, who it’s for, why now) 2) 14-day launch calendar (daily checklist) 3) Announcement package (threads/posts copy, partner outreach copy) 4) Community funnel plan (quests/points/ambassadors in simple form) 5) Partner intro map (who to contact + message templates) 6) Post-launch KPI dashboard spec (what to track)

What we need from the client - Product status (what is actually live) - Links, docs, branding assets - Any existing community channels

Price + payment terms - \$5,000–\$12,000 - 80% upfront / 20% on delivery

Acceptance criteria - Launch calendar delivered - Copy pack delivered - Partner outreach list + scripts delivered

Offer C — Growth/BD Retainer (3-month minimum)

What this is - Monthly execution to create partnerships, ecosystem traction, and revenue pathways.

Who it is for - Teams with product built but no consistent BD pipeline. - Ecosystems/infra partners who want expansion outcomes in Africa.

Retainer menu (we standardize 4–6 items) - Weekly pipeline build + tracking (targets, stages, next actions) - Partner outreach (messages, follow-ups, scheduling) - Ecosystem integrations coordination - Grant submissions (applications + reporting plan) - Launch ops for releases - Weekly founder call + weekly written update

Price + payment terms - \$3,000–\$10,000 per month - 3-month minimum - Paid monthly upfront

Acceptance criteria (per month) - Weekly pipeline report delivered (every week) - Number of outreach messages/meetings hit - Clear next-month plan

Offer D — Fundraising Prep (Advisory)

What this is - A structured “become fundable” program. We fix narrative, materials, and execution. - This is not a guarantee of funding.

Who it is for - Teams raising in the next 60–120 days.

What the client receives (4–6 weeks) 1) Fundraising narrative rewrite 2) Pitch deck improvement 3) Data room checklist + structure 4) Investor/partner list by thesis (who fits and why) 5) Outreach scripts + tracking system 6) Weekly pipeline review cadence

Pricing options (recommended) Option D1 — Upfront only - \$7,500–\$15,000 upfront

Option D2 — Upfront + fixed closing bonus (recommended if used) - \$7,500–\$15,000 upfront - + \$7,500 fixed closing bonus if raise closes within 120 days

Plain-language compliance note (non-legal) - Charging “a percentage of funds raised” for introductions can create regulatory risk in many jurisdictions. - Safer approach: charge for advisory work (fixed fee) and use a fixed closing bonus. - Get local legal review for exact contract language.

Acceptance criteria - Deck + data room checklist delivered - Investor list + outreach scripts delivered - Weekly tracking + review calls completed for the agreed period

4) How we position the Lab (including your “VC-style” idea)

We can position as “VC-connected” without pretending we are a VC.

Approved positioning - “Affidex Lab is a venture studio and advisory firm. We incubate and support teams with execution and fundraising preparedness, and we collaborate with an investor network.”

Not approved (until true) - “Affidex Lab is a VC.” - “We guarantee funding.”

How we make venture-studio upside real - For incubated teams, Affidex Lab can take: - an upfront service fee (cash), and - a small equity/token warrant (upside), tied to milestones.

5) Distribution plan (how we get clients with a small audience)

In Q1 and Q2, our main growth channel is outbound + referrals.

Weekly targets (minimum operating standard)

Every week: - Add 50 new qualified leads - Send 100 targeted outreach messages
- Book 10 discovery calls - Send 4 proposals - Close 1 deal (early stage may be 1 deal every 1–2 weeks; target is to ramp)

The pipeline stages (so everyone uses the same language)

- 1) Identified — target found
- 2) Messaged — first message sent
- 3) Engaged — replied / interested
- 4) Call booked — time scheduled
- 5) Diagnosed — discovery call done
- 6) Proposed — offer sent
- 7) Negotiation — terms being finalized
- 8) Closed — invoice paid

Who we target first (high probability)

Priority segment 1: protocols pre-audit / pre-mainnet - They pay for readiness because security risk is existential.

Priority segment 2: teams that recently raised and must deliver - They pay for speed and certainty.

Priority segment 3: ecosystems/infra with expansion budgets - They pay for developer onboarding and integrations.

Outreach scripts (simple)

Script for Offer A (readiness) - “Saw you’re preparing audit/mainnet. We run a 10-day Protocol Readiness Sprint (threat model, invariants, test plan, deployment + monitoring checklist). Flat fee, paid upfront, delivered in 10 business days. Are you pre-audit or post-audit?”

Script for Offer C (retainer) - “If you have product but no consistent BD pipeline, we run a 3-month Growth/BD retainer: weekly pipeline build, partner outreach, ecosystem integrations, grants. Want the scope + pricing?”

Script for Offer D (fundraise prep) - “If you’re raising in the next 60–120 days, we run Fundraising Prep: narrative + deck + data room + investor list + outreach system + weekly pipeline tracking. Want a quick call to see if it fits?”

6) Delivery operations (how we handle high volume without chaos)

To truly handle ~15 concurrent workstreams, delivery must be standardized.

Standard roles per engagement

- Engagement Lead: scope control, client comms, timelines
- Technical Lead: contracts/deployment readiness work
- Reviewer: second-pass review for quality/risk
- BD Operator (for Launch/Retainer): outreach + tracking + reporting

Standard weekly client rhythm

- Kickoff call (scope + timeline)
- Midpoint update (written)
- Final delivery call
- Weekly written report for retainers

Quality gates (minimum)

For any contract-related work, the team must deliver: - threat model + assumptions list - deployment checklist - monitoring checklist

7) Sponsorships + ecosystem money (Lab-level funding)

These are paid programs where sponsors fund outcomes.

Program 1: “Affidex Build Week” (5 days) - Sponsor pays for developer onboarding + integration demos. - Sponsor range: \$10k–\$50k

Program 2: “University Web3+AI Tour” - Sponsor pays for developer acquisition. - Sponsor range: \$5k–\$30k per city/campus

Program 3: “Integration Sprint” - Sponsor pays to get their stack integrated into 3–5 teams. - Sponsor range: \$15k–\$80k

Sponsor KPIs - # developers onboarded - # projects integrated - # PRs merged / repos shipped - attendance + completion rate - 30-day post-program dev activity

8) Grants positioning (non-dilutive funding for the Lab)

Grant narrative that wins - “Affidex Lab drives ecosystem adoption via open-source tooling, developer onboarding, and integrations.”

Grant-friendly outputs (what we promise) - open-source templates (deployment, monitoring, readiness) - integration guides and adapters - workshops and public reporting

Grant engine (weekly) - Submit consistently (weekly cadence) - Use reusable modules: impact, implementation plan, budget, KPIs, reporting schedule

9) How the Lab raises investment (after cashflow proof)

Sequence (recommended) 1) Q1: build cashflow (sprints + retainers) 2) Q2: lock sponsorships + grants 3) Q3: raise studio round (SAFE/convertible) from strength

What investors want to see at Lab level - Predictable revenue - Clear margins and delivery capacity - Portfolio upside (studio terms) - Repeatable distribution (pipeline, partners)

Minimum data room checklist - studio deck - 12-month operating plan + budget - revenue proof (contracts/invoices) - case studies (DecaFlow + 2) - standard terms for sprints/retainers/studio incubation

10) First 30 days execution plan (copy/paste)

Week 1 - Finalize the 4 offers (scope, price, terms) - Create 1-page PDF/one-pager per offer - Publish DecaFlow case study (short + clear)

Week 2 - Build a 200-lead list (50 per segment) - Start outbound: 100 messages/week - Book 5–10 calls

Week 3 - Send proposals (4 per week) - Close 1–2 sprint deals - Start 1 retainer

Week 4 - Deliver first sprint with excellence - Collect testimonial - Publish a second mini case study

30-day targets - 2 paid sprint engagements closed - 1 retainer started - \$10k–\$25k cash collected

11) KPI scoreboard (definitions)

These are tracked weekly and monthly.

Revenue KPIs - Cash collected: total money received this period - MRR: sum of active retainers per month - Gross margin %: $(\text{Revenue} - \text{direct delivery cost}) / \text{Revenue}$

Sales KPIs - New leads added - Outreach messages sent - Calls booked - Proposals sent - Close rate: $\text{deals closed} / \text{proposals sent}$ - Average deal size: $\text{total revenue closed} / \text{number of deals}$

Delivery KPIs - On-time delivery %: $\text{engagements delivered on or before deadline} / \text{total}$ - Client satisfaction: 1–10 score collected at end of engagement

Funding KPIs - Grants submitted - Grants approved \$ (or credits) - Sponsor \$ closed - Investor meetings booked

Appendix A — Simple proposal template (for sprints)

Use this structure in a proposal (1–2 pages): - Problem summary (what risk/outcome we are solving) - Scope (what is included) - Exclusions (what is not included) - Timeline (start date, delivery date) - Deliverables list (bulleted) - Price + payment terms - Acceptance criteria - Next steps (invoice + kickoff)
