The Goal:

- 500-2,000 unique wallets

2. Calculate from platform fees:

Hey everyone!

I'm Lovette, building DecaFlow - a multi-chain DEX on Base with near-zero gas fees **and** real cash prizes.

We're running a "**Pioneer 100**" campaign:

- First 100 to 1,000 points = 2x airdrop allocation
- Weekly cash rewards from platform fees
- Currently at X/100 spots **filled**

Built for African traders - fast, cheap, **and** you earn as you trade. Would love feedback from this community!

5. Message XelleX Innov8 for Partnership

Why: Instant access to their community

Time: 15 minutes

How:

Send this DM to your group:

Hey XelleX team,

Really excited about the opportunity to collaborate!

I'd like to propose a partnership structured around two core pillars:

****1. Stablecoin Integration****

We integrate AEDS and SARX as featured trading pairs on DecaFlow's **multi-chain** DEX. This provides:

Immediate liquidity across **6** chains (Ethereum, **Base**, Arbitrum, Optimism, Polygon, Avalanche)

Access to our growing user **base**

Featured placement in our UI

Shared transaction volume

****2. Joint Community Collaboration****

Beyond tech integration:

"AEDS/SARX Trading Challenge" with special points

Cross-promotion in **both** communities

Joint AMAs and educational content

Shared leaderboard contests

****The Numbers:****

- Current users: XXX
- Weekly volume: \$XXX
- Platform **built** on **Base** (infrastructure-first approach)
- Growing **20%+** week-over-week **organically**

This aligns with your **builder-first**, long-term approach. We're **not interested in transactional promotion** – we're focused on **building** sustainable infrastructure that **brings** real utility to **both** ecosystems.

Can we **schedule** a call to **discuss** implementation details **and** timeline?

Best,

Lovette

THE MATH (Why This Works)

Your Current Situation:

- Platform fee: 0.8%
- If you do \$500k volume in 30 days
- Platform revenue: \$4,000
- Use 80% for prizes: \$3,200
- Keep 20% for operations: \$800

Prize Distribution (Weekly):

- \$800/week prize pool (at \$500k/month volume)
- Rank #1: \$320
- Rank #2: \$200
- Rank #3: \$120
- Rank #4-10: \$160 split

Why Users Come:

1. **Real money prizes** (not promises)
2. **Low barrier** (just trade, which they already do)
3. **Transparent** (live leaderboard)
4. **Future upside** (airdrop eligibility)
5. **Community** (competing with others)

The Referral Multiplier:

- You recruit: 50 users/week manually
- 30% refer 1 friend each = 15 referrals
- Week 1: 65 users
- Week 2: 95 users (with compounding)
- Week 3: 145 users
- Week 4: 220 users

- **Total: 525 users** (vs 200 without referrals)
-

KEY SUCCESS METRICS FOR VCS

What They Want to See:

1. Growth Rate

- Week-over-week user growth
- Ideally: 20-50%+ weekly
- Track: Users, volume, transactions

2. Engagement

- Transactions per user
- Ideally: 10+ transactions/user
- Shows: Product-market fit

3. Retention

- % users who trade 2+ times
- Ideally: 40%+
- Shows: Stickiness

4. Organic Growth

- % from referrals
- Ideally: 30%+
- Shows: Viral potential

5. Unit Economics

- Revenue per user
- If \$500k volume, 800 users = \$625/user
- 0.8% fee = \$5/user revenue
- Shows: Monetization

Your VC Pitch (After 30 Days):

"In 30 days with ZERO marketing budget, we achieved:

- ▮ Users: XXX unique wallets
- ▮ Volume: \$XXX,XXX
- ▮ Transactions: XX,XXX
- ▮ Growth: XX% week-over-week
- ▮ Referral Rate: XX%
- ▮ Platform Revenue: \$X,XXX
- ▮ Partnerships: X (XelleX, etc.)

All organic. All from a points system and community building.

With funding, we can:

- Build referral **program** incentives
- Launch liquidity mining
- Hire community managers
- Scale to 10k+ users **in** 60 days

We're not raising to figure **out** product-market **fit**.

We're raising to pour gasoline **on** a fire that's already burning.

Asking: \$XXX,XXX

Use: 60% growth, 30% product, 10% team

Traction: Already proven

Market: Africa + Base ecosystem (massive opportunity)

Who's **in**?"

COMMON MISTAKES TO AVOID

DON'T:

1. **Spam communities** - You'll get banned
2. **Ignore comments** - Engagement is everything
3. **Give up after week 1** - Growth is exponential
4. **Neglect referral system** - It's your force multiplier
5. **Forget to track metrics** - You need data for VCs
6. **Be too salesy** - Provide value first
7. **Try to do everything** - Focus on what works
8. **Forget to celebrate wins** - Share success stories

DO:

1. **Be consistent** - 5 groups/day, 50 tweets/day
2. **Engage authentically** - Build real relationships
3. **Track everything** - Google sheet with metrics
4. **Optimize weekly** - Double down on what works
5. **Celebrate users** - Make them feel special
6. **Be transparent** - Share the journey

7. **Move fast** - Ship features quickly
8. **Help others** - Give before you ask

THE BOTTOM LINE

You have everything you need:

FINAL THOUGHTS

This is 100% doable.

You're not selling vapor. You have a working product.
You're not selling dreams. You have real cash prizes.
You're not selling tokens. You have actual utility.

Your advantages:

1. Base = low fees (huge for Africa)
2. Multi-chain = massive TAM
3. Points system = gamification
4. Cash prizes = real incentives
5. African focus = underserved market

What success looks like:

- Week 1: 50-100 users
- Week 2: 150-300 users
- Week 3: 350-650 users
- Week 4: 500-2,000 users

Each user is:

- A data point for VCs
- A potential referrer
- A social proof element

- A revenue generator
- A community member

**You're not just building a user base.
You're building a movement.**

Now go execute. You got this!

P.S. - When you hit your first 100 users, celebrate it publicly on Twitter. When you hit 500, reach out to VCs. When you hit 1000, you'll have your pick of investors.
