

DecaFlow Go-To-Market Strategy

B2B & B2C Dual-Track Approach

Date: January 4, 2026

Version: 1.0

Status: Ready for Execution

Executive Summary

DecaFlow operates in two distinct markets: - **B2B:** Privacy-as-a-Service infrastructure for DeFi protocols - **B2C:** MEV-protected swap aggregator for individual traders

This dual-track GTM strategy maximizes market penetration while building defensible moats through network effects.

Core Insight: B2B drives credibility and integration volume. B2C drives user adoption and data for AI improvements. Both feed each other.

Market Positioning

B2B Positioning

"The Privacy Layer for Arbitrum DeFi"

- We're NOT a competitor to Uniswap, GMX, or Camelot
- We're infrastructure that POWERS them with MEV protection
- Like Stripe for payments or Auth0 for authentication
- Revenue share model aligns incentives with partners

B2C Positioning

"The Smartest Way to Trade on Arbitrum"

- AI-powered routing that saves you money on every trade
- Automatic MEV protection when you need it
- Best prices across all DEXs + privacy when it matters
- Free MEV analytics to see how much you're saving

B2B Go-To-Market Strategy

Target Segments (Prioritized)

Tier 1: High-Value Protocols (Immediate Focus)

Target: Large protocols with high-value trades and MEV exposure

Protocol	Use Case	Monthly Volume	MEV Exposure	Priority
GMX	Private collateral deposits, position management	\$2B+	HIGH	P0
Camelot	Privacy mode for large swaps	\$500M+	HIGH	P0
Radiant Capital	Private lending deposits/withdrawals	\$300M+	MEDIUM	P1
Vertex Protocol	Private derivatives trading	\$800M+	HIGH	P1
Gains Network	Private position opens	\$400M+	MEDIUM	P2

Value Proposition: - "Add MEV protection to your protocol in 10 lines of code" - "Protect your whales without building privacy infrastructure" - "Increase retention: Users trade more when protected from MEV"

Tier 2: Mid-Size Protocols (3-6 Months Out)

- Smaller DEXs (Trader Joe, Sushiswap)
- Lending protocols (Compound forks, Aave forks)
- NFT marketplaces (Stratos, TofuNFT)

Tier 3: New Launches (Ongoing Pipeline)

- New protocols launching on Arbitrum
 - Protocols migrating from other chains
 - Emerging DeFi categories
-

B2B Sales Playbook

Phase 1: Outreach & Discovery (Weeks 1-2)

Channel 1: Direct Outreach - Identify decision makers (Head of Product, CTO, Founder) - Tools: LinkedIn, Twitter, Discord, Telegram - Message template:

Subject: Privacy SDK for [Protocol] - 10 min demo?

Hey [Name],

Noticed [Protocol] has been crushing it on Arbitrum. As you scale, MEV is likely becoming a bigger issue for your large traders.

We built a privacy SDK that lets [Protocol] offer MEV-protected transactions in ~10 lines of code. Already talking with GMX and Camelot about integrations.

Quick 10-min demo this week? I can show you:

- Live MEV analytics for [Protocol] users
- Integration effort (minimal)
- Revenue share model

[Calendar Link]

Best,

[Your Name]

DecaFlow Team

Channel 2: Community Engagement - Join protocol Discord/Telegram - Participate genuinely in discussions - Build relationships before pitching - Offer value: Share MEV data insights

Channel 3: Twitter Engagement - Reply to protocol announcements with thoughtful insights - Tag protocols when sharing MEV analytics - Create protocol-specific MEV reports

Phase 2: Demo & Technical Validation (Weeks 3-4)

Demo Script (15 minutes):

1. The Problem (3 min)

2. Show MEV dashboard filtered to their protocol
3. "Your users lost \$X to MEV last month"
4. "Large traders are avoiding L2s because of this"

5. The Solution (5 min)

6. Live code demo: SDK integration
7. Show before/after: Trade without privacy vs with privacy
8. Real examples from testnet

9. The Business Case (5 min)

10. Revenue share model (10% of privacy fees to protocol)
11. User retention data: Privacy users trade 3x more
12. Competitive advantage: "First major protocol with built-in MEV protection"

13. Next Steps (2 min)

14. Technical feasibility review
15. Testnet integration
16. Co-marketing planning

Materials Needed: - [] SDK Documentation (technical) - [] Integration Estimate Document - [] Revenue Projection Calculator - [] Case Study Template - [] Partnership Agreement Template

Phase 3: Integration & Launch (Weeks 5-12)

Integration Support: - Dedicated Slack/Discord channel - Pair programming sessions if needed - Weekly check-ins - QA and testing support

Co-Marketing Plan:

- Week 1: Soft launch (testnet)
- Week 2-3: Beta with select users
- Week 4: Public announcement
 - Joint blog post
 - Twitter Space AMA
 - Press release to crypto media
- Week 5-8: Performance reporting
 - Weekly stats: MEV saved, adoption rate
 - User testimonials
 - Ongoing promotion

Phase 4: Retention & Expansion (Ongoing)

Quarterly Business Reviews: - Usage metrics - MEV saved for users - Revenue generated (both sides) - Feature requests - Expansion opportunities

Expansion Playbook: - Start with one use case (e.g., swaps) - Expand to additional use cases (lending, NFTs, etc.) - White-label privacy dashboard for protocol - Custom analytics and reporting

B2B Pricing Strategy

Tier 1: Partnership Model (For Major Protocols)

Revenue Share: - Protocol gets 10% of all privacy fees generated - DecaFlow gets 90% - No upfront costs - No minimum commitments

Why This Works: - Aligned incentives - Low barrier to entry - Protocols motivated to promote

Tier 2: Enterprise SaaS Model (For Mid-Size Protocols)

Monthly Subscription + Usage: - \$2,000/month base (up to \$1M monthly volume) - \$5,000/month (\$1M-\$10M monthly volume) - \$10,000/

month (\$10M-\$50M monthly volume) - \$20,000/month (\$50M+ monthly volume)

Includes: - SDK access and updates - Dedicated support - Custom analytics dashboard - SLA guarantees (99.9% uptime) - Priority feature requests

Tier 3: Self-Service Model (For Indie Developers)

Free with Usage Fees: - Free SDK access - Documentation and tutorials - Community support (Discord) - Pay-as-you-go: Standard privacy fees apply - DecaFlow keeps 100% of fees

B2B Success Metrics

Acquisition Metrics: - Protocols in pipeline (target: 10 by month 3) - Demo conversion rate (target: 40%) - Time to first integration (target: <6 weeks)

Activation Metrics: - SDK integrations completed (target: 3 by month 6) - Time to production (target: <12 weeks) - Integration satisfaction score (target: 9+/10)

Revenue Metrics: - MRR from enterprise plans (target: \$10K by month 6) - Revenue share from partnerships (target: \$5K/month by month 6) - Average revenue per protocol (target: \$3K/month)

Retention Metrics: - Protocol churn (target: <5% annually) - Expansion revenue (target: 20% of existing protocol revenue grows QoQ) - NPS score from protocol partners (target: 50+)

B2C Go-To-Market Strategy

Target Segments

Segment 1: MEV-Aware Power Traders (Primary)

Profile: - Trade size: \$5K-\$100K+ per transaction - Monthly volume: \$50K-\$1M+ - Chains: Primarily Arbitrum, some Base/Optimism - Pain: Knows about MEV, actively seeks protection - Tech savvy: Uses multiple DEXs, aggregators

Where to Find Them: - Twitter: Follow MEV researchers, Flashbots - Discord: GMX, Camelot, DeFi protocol servers - Telegram: Private trading groups - Reddit: r/mev, r/defi, r/arbitrum

Messaging: - "Stop losing thousands to MEV bots" - "AI predicts MEV risk on every trade" - "Free MEV dashboard: See exactly how much you've lost"

Acquisition Tactics: 1. **MEV Calculator Tool** - Enter wallet address → See total MEV lost - Viral hook: "I lost \$X to MEV bots 🤖" - CTA: "Trade with protection on DecaFlow"

1. **Twitter Thought Leadership**
2. Daily MEV insights and statistics
3. Tag wallets with high MEV exposure
4. Educational threads on MEV protection
5. **Protocol Discord Outreach**
6. Helpful presence in GMX, Camelot servers
7. Answer questions about MEV
8. Soft promotion when relevant

Segment 2: Whale Traders (High-Value)

Profile: - Trade size: \$100K-\$5M+ per transaction - Monthly volume: \$1M-\$50M+ - Currently using OTC desks or private routes - Pain: MEV exposure on L2s prevents on-chain trading

Where to Find Them: - Telegram: OTC trading groups - Twitter: Whale wallets (track on-chain) - Connections: VCs, protocols, influencers

Messaging: - "Trade size that matters without MEV risk" - "Private OTC-style execution on-chain" - "Save 50-95% on MEV vs standard DEX routing"

Acquisition Tactics: 1. **White Glove Onboarding** - Dedicated concierge service - Custom routing strategies - Privacy consultations

1. **Whale Referral Program**
2. Existing whales refer new whales
3. 10% of fees from referrals (lifetime)
4. Exclusive whale-only features
5. **Direct Wallet Outreach**

6. Identify high-value wallets on-chain
7. Twitter DM with personalized MEV report
8. "You lost \$X to MEV last month. Let's fix that."

Segment 3: DeFi Natives (Volume Play)

Profile: - Trade size: \$500-\$5K per transaction - Monthly volume: \$5K-\$50K
- Active DeFi users across multiple protocols - Pain: Wants best prices but doesn't know about MEV

Where to Find Them: - Twitter: DeFi CT - Discord: Protocol communities - YouTube: DeFi tutorial viewers - TikTok: Crypto education content

Messaging: - "Best prices across all DEXs" - "Smart routing saves you money" - "Free to use, no hidden fees"

Acquisition Tactics: 1. **Content Marketing** - YouTube tutorials: "How to trade on Arbitrum" - Blog posts: "Why your DEX trades are losing money" - Twitter threads: DeFi tips and tricks

1. Protocol Integrations (B2B→B2C)

2. Users discover via GMX, Camelot integrations
3. "Privacy Mode Powered by DecaFlow"

4. Seamless UX within familiar protocols

5. Incentive Programs

6. Points system for volume
7. Airdrops for early users
8. Trading competitions

Segment 4: Arbitrum Ecosystem Newcomers

Profile: - New to Arbitrum (from Ethereum, Base, etc.) - Trade size: \$100-\$5K - Learning the ecosystem - Pain: Doesn't know which DEX to use

Messaging: - "The easiest way to trade on Arbitrum" - "One app, all DEXs, best prices" - "Trusted by GMX and Camelot users"

Acquisition Tactics: 1. **Arbitrum Ecosystem Marketing** - Featured in Arbitrum Foundation content - Partnership with Arbitrum onboarding tools - "New to Arbitrum? Start here"

1. Paid Acquisition (Low Budget)

2. Twitter ads targeting Arbitrum keywords
3. Google ads for "Arbitrum DEX"
4. Coingecko/CoinMarketCap listings

5. **Referral Program**

6. "Invite friends, earn fees"
 7. Both sides get bonus trades
 8. Viral sharing mechanics
-

B2C Channel Strategy

Channel 1: Twitter (Primary - Owned Media)

Goal: Thought leadership + community building

Content Pillars: 1. **MEV Education** (3x/week) - "What is MEV and why you should care" - Real examples with transaction links - Tips to avoid MEV

1. **Product Updates** (2x/week)
 2. New features
 3. Integration announcements
 4. Performance stats
5. **Market Insights** (2x/week)
 6. Arbitrum DeFi trends
 7. Protocol analysis
 8. Trading opportunities
9. **User Stories** (1x/week)
 10. "User saved \$X with DecaFlow"
 11. Testimonials and case studies
 12. Community highlights

Growth Tactics: - Reply to relevant tweets (MEV, DeFi, Arbitrum) - Quote tweet with insights - Tag protocols and users (authentically) - Run Twitter Spaces monthly - Engage with influencers genuinely

Target Metrics: - 5,000 followers by month 6 - 10% engagement rate - 100+ quality mentions per month

Channel 2: Discord Community

Goal: Support + engagement + retention

Structure: - #announcements (product updates) - #general (community chat) - #support (help desk) - #trading-alpha (premium: MEV insights) - #developers (SDK integrations) - #feedback (product suggestions)

Community Programs: - Weekly AMAs with team - Trading competitions - Alpha channels for top users - Ambassador program

Target Metrics: - 1,000 members by month 6 - 20% monthly active users - <2 hour average response time in #support

Channel 3: Content Marketing

Goal: SEO + education + lead generation

Content Types:

1. **Blog Posts** (2x/month)
 2. "Complete Guide to MEV on Arbitrum"
 3. "How DecaFlow's AI Predicts MEV Risk"
 4. "GMX Integration Case Study"
 5. "Best Practices for Large Trades"
6. **Video Content** (1x/month)
 7. Product tutorials
 8. Trading tips
 9. Behind-the-scenes
 10. Protocol integrations
11. **Research Reports** (1x/quarter)
 12. "State of MEV on Arbitrum"
 13. "DeFi Trading Patterns Analysis"
 14. Public good for ecosystem

Distribution: - DecaFlow blog - Medium/Mirror - YouTube channel - Twitter threads - Reddit (r/arbitrum, r/defi)

Channel 4: Partnerships & Integrations

Goal: Distribution through protocols

Integration Marketing: - Co-announcements with protocols - Cross-promotion in Discord/Twitter - Shared incentive programs - Branded "Privacy Mode" in partner UIs

Wallet Integrations: - RainbowKit (done) - MetaMask Snaps (potential) - Rabby wallet integration - Safe wallet integration

Aggregator Listings: - CoinGecko - CoinMarketCap - DeFiLlama - Dune Analytics

Channel 5: Paid Acquisition (When Budget Allows)

Phase 1: Testing (\$5K/month budget) - Twitter ads: Arbitrum + MEV keywords - Google ads: "Arbitrum DEX", "MEV protection" - Crypto media sponsorships (The Defiant, Bankless)

Phase 2: Scaling (\$20K+/month budget) - Retargeting campaigns - Influencer partnerships - Podcast sponsorships - Conference sponsorships

Target Metrics: - CAC < \$50 for retained users - LTV:CAC ratio > 3:1 - ROAS > 200%

B2C User Journey

Stage 1: Awareness

How They Discover Us: - Twitter thread about MEV goes viral - See "Powered by DecaFlow" in GMX - Friend shares MEV calculator results - Featured in Arbitrum ecosystem content

First Impression: - MEV Dashboard (enter wallet → see losses) - Clean, professional landing page - Social proof (protocol partnerships)

Stage 2: Consideration

Evaluation Criteria: - "Is this safe?" → Security audit badges, track record - "Is this better?" → Price comparison, MEV savings calculator - "Is this easy?" → Video tutorials, simple UI

Content That Converts: - Video tutorial: "First trade on DecaFlow" - Comparison page: DecaFlow vs Uniswap - FAQs addressing objections - User testimonials

Stage 3: Activation (First Trade)

Onboarding Flow: 1. Connect wallet (RainbowKit) 2. Select tokens 3. See price comparison + MEV risk score 4. Enable privacy if recommended 5. Execute trade 6. Success screen with MEV savings

Activation Goals: - Time to first trade: <2 minutes - Success rate: >95% - MEV savings shown clearly

Stage 4: Retention

Hook Mechanics: - MEV savings tracker in dashboard - "You've saved \$X total" - Weekly email: Your trading recap - Points accumulation for airdrops

Engagement Loops: - Daily: Check MEV dashboard - Weekly: Claim trading points - Monthly: See savings report - Quarterly: Airdrop seasons

Stage 5: Advocacy (Referrals)

Referral Incentives: - Give 10% fee discount to friends - Get 10% of their fees (lifetime) - Unlock premium features at 5 referrals - Whale tier at 20 referrals

Sharing Triggers: - After big MEV savings - Weekly stats summary - Milestone achievements - Exclusive features unlock

B2C Pricing & Monetization

Free Tier

Features: - Unlimited swaps - Basic routing (0x aggregation) - Standard privacy (CoW Protocol) - Community support

Fees: - 0.3% platform fee on all trades - No additional costs for privacy

Pro Tier (\$49/month)

Features: - Priority routing (lowest latency) - Advanced privacy (custom strategies) - MEV savings analytics - Trading API access - Priority support

Fees: - 0.2% platform fee (33% discount) - Additional savings offset the subscription

Whale Tier (\$499/month)

Features: - White-glove support - Custom routing strategies - OTC desk access - Private Telegram channel - Dedicated account manager - API with higher limits

Fees: - 0.1% platform fee (67% discount) - Easily pays for itself on large volumes

B2C Success Metrics

Acquisition Metrics: - Monthly active wallets (target: 5,000 by month 6) - New wallet signups (target: 2,000/month by month 6) - Acquisition cost per user (target: <\$50)

Activation Metrics: - Wallet connection rate (target: 60%) - First trade completion (target: 40% of connected wallets) - Time to first trade (target: <2 minutes)

Engagement Metrics: - Average trades per user per month (target: 8+) - Average trade size (target: \$5,000+) - Monthly retention (target: 30%+)

Revenue Metrics: - Monthly trading volume (target: \$50M by month 6) - Revenue per user (target: \$100/month) - MRR from subscriptions (target: \$10K by month 6)

Virality Metrics: - Referral rate (target: 15% of users refer) - Viral coefficient (target: >0.3) - Social shares per user (target: 2+)

Launch Timeline

Month 1-2: Foundation (We Are Here)

B2B: - ☐ Privacy SDK built and documented - ☐ Demo environment ready - ☐ Partnership deck and materials - ☐ Outreach to Tier 1 protocols (GMX, Camelot, Radiant) - ☐ First demo calls scheduled

B2C: - ☐ MEV Dashboard launched - ☐ Core product live and functional - ☐ Twitter content engine started - ☐ Discord community launched - ☐ First 100 users acquired

Month 3-4: Traction

B2B: - ⌚ First protocol integration in testing (GMX or Camelot) - ⌚ 2-3 additional protocols in pipeline - ⌚ First case study published - ⌚ Speaking at Arbitrum events

B2C: - ⌚ 1,000+ monthly active users - ⌚ \$10M+ monthly volume - ⌚ MEV calculator tool launched (viral moment) - ⌚ Referral program live - ⌚ First paid user acquisition tests

Month 5-6: Scale

B2B: - ⌚ First integration live in production - ⌚ Co-marketing campaign with partner - ⌚ 5+ protocols in pipeline - ⌚ Enterprise tier pricing launched

B2C: - ⌚ 5,000+ monthly active users - ⌚ \$50M+ monthly volume - ⌚ Pro tier subscriptions launched - ⌚ Paid acquisition scaled (\$5K/month) - ⌚ Ambassador program launched

Month 7-12: Dominance

B2B: - ⌚ 3+ integrations live - ⌚ 10+ protocols in pipeline - ⌚ \$50K+ MRR from B2B - ⌚ SDK becoming standard for Arbitrum protocols

B2C: - ⌚ 20,000+ monthly active users - ⌚ \$200M+ monthly volume - ⌚ Top 3 DEX on Arbitrum by volume - ⌚ \$100K+ MRR from fees - ⌚ Profitable unit economics

Measurement Framework

North Star Metric

Total Value Protected: Sum of (trading volume × MEV risk score)

This captures both B2B and B2C success: - More protocols = more volume -
More users = more volume - Higher risk trades = more value delivered -
Aligns with mission: Protect users from MEV

Key Results (6-Month Targets)

Revenue: - \$100K+ total revenue (fees + subscriptions) - \$50K+ MRR run rate - 30%+ MoM growth

Adoption: - 3+ protocol integrations live - 5,000+ monthly active wallets - \$100M+ monthly trading volume

Product: - 95%+ trade success rate - <500ms average routing time - 99.9%+ uptime

Community: - 5,000+ Twitter followers - 1,000+ Discord members - 50+ NPS score

Budget Allocation (First 6 Months)

Scenario 1: Bootstrap (\$10K total)

B2B (60% = \$6K): - \$3K: Demo environment, materials - \$2K: Conference tickets, travel - \$1K: Tools (CRM, analytics)

B2C (40% = \$4K): - \$2K: Twitter ads testing - \$1K: Content creation (videos, graphics) - \$1K: Incentives (referral bonuses, competitions)

Scenario 2: Funded (\$100K total)

B2B (50% = \$50K): - \$20K: Sales/BD hire (part-time) - \$15K: Marketing materials, events - \$10K: Demo apps, custom integrations - \$5K: Tools and infrastructure

B2C (50% = \$50K): - \$20K: Paid acquisition (ads, influencers) - \$15K: Content creation (professional) - \$10K: Community incentives (airdrops, competitions) - \$5K: Tools (analytics, automation)

Scenario 3: Grant-Funded (\$50K from Arbitrum)

Focus: Ecosystem Public Goods (70%) + Growth (30%)

Public Goods (70% = \$35K): - \$15K: MEV Dashboard enhancements - \$10K: Open-source SDK development - \$5K: Research and reports - \$5K: Developer education

Growth (30% = \$15K): - \$10K: Protocol integrations - \$5K: Community building

Risk Mitigation

Risk 1: Protocol Integration Delays

Mitigation: - Target 5+ protocols (only need 2-3 to succeed) - Self-service SDK reduces dependency - Focus on B2C in parallel

Risk 2: Low B2C Adoption

Mitigation: - Leverage B2B integrations for distribution - Aggressive referral incentives - Focus on high-value users first (whales)

Risk 3: Competitive Threats

Mitigation: - First-mover advantage on Arbitrum - Network effects from protocol integrations - Continuous AI model improvements - Open-source builds community trust

Risk 4: Market Downturn

Mitigation: - MEV protection MORE valuable in volatile markets - Focus on retention over acquisition - Lean operations, low burn rate

Competitive Differentiation

vs. Standard DEX Aggregators (1inch, Matcha)

Our Advantage: - AI-powered MEV protection - Privacy routing built-in - Arbitrum-native optimization - Protocol integration SDK

vs. Privacy-Only Solutions (CoW Protocol)

Our Advantage: - Smart routing (privacy only when needed) - Better UX (one app for all trades) - AI risk assessment - Multi-chain support

vs. Individual DEXs (Uniswap, Camelot)

Our Advantage: - Aggregation across all DEXs - MEV protection layer - Not competing, complementing - B2B SDK makes us infrastructure partner

Success Stories (To Build)

B2B Case Study Template

"How [Protocol] Reduced User MEV by 80% with DecaFlow"

- Challenge: Users losing money to MEV
- Solution: Integrated Privacy SDK in 2 weeks
- Results: 80% reduction in MEV, 40% increase in large trades
- Quote from protocol team
- Integration code snippet
- Metrics and charts

B2C Case Study Template

"How [Whale Trader] Saved \$50K in One Month"

- Background: Professional trader on Arbitrum
 - Problem: Losing thousands to MEV monthly
 - Solution: Switched to DecaFlow for large trades
 - Results: \$50K saved, 95% MEV reduction
 - Quote and testimonial
 - Trade examples with savings
-

Partnerships & Alliances

Strategic Partners

1. **Arbitrum Foundation**
2. Grant recipient
3. Featured in ecosystem showcase
4. Co-marketing opportunities
5. **CoW Protocol**
6. Technical integration partner
7. Joint MEV research
8. Cross-promotion
9. **0x Labs**
10. Routing partner
11. Technical collaboration
12. Shared infrastructure

Media Partners

1. **The Defiant**
2. **Bankless**
3. **Unchained Podcast**
4. **DeFi Dad**
5. **Arbitrum-focused creators**

Community Partners

1. **GMX Community**
 2. **Camelot Community**
 3. **Arbitrum Discord**
 4. **DeFi Twitter CT**
-

Marketing Materials Needed

B2B Materials

- [] Partnership Deck (15 slides)
- [] SDK Documentation (comprehensive)
- [] Demo Video (5 minutes)
- [] Case Study Template
- [] ROI Calculator (spreadsheet)
- [] Integration Estimate Document
- [] Partnership Agreement Template
- [] Technical Architecture Diagram
- [] Security Audit Report

B2C Materials

- [] Landing Page (conversion-optimized)
- [] Product Demo Video (2 minutes)
- [] Tutorial Videos (5x short-form)
- [] Social Media Graphics (20+ templates)
- [] Blog Posts (10+ evergreen)
- [] Email Templates (onboarding, retention)
- [] Referral Share Graphics
- [] Press Kit
- [] Brand Guidelines

Team & Execution

Immediate Needs (Month 1-3)

Can Execute With Current Team: - B2B outreach and demos - Content marketing - Community building - Product improvements

Leverage AI & Automation: - Social media scheduling (Buffer, Hootsuite) - Content creation assistance (ChatGPT, Midjourney) - Analytics and reporting (Dune, Google Analytics)

Growth Needs (Month 4-6)

Consider Hiring: 1. **BD/Sales Lead** (Part-time → Full-time) - Owns B2B partnerships - Protocol integrations - Enterprise sales

1. **Growth Marketer** (Part-time)
 2. Owns B2C acquisition
 3. Paid ads management
 4. Conversion optimization
 5. **Community Manager** (Part-time)
 6. Discord moderation
 7. Twitter engagement
 8. Support and onboarding
-

Conclusion

DecaFlow's dual B2B/B2C strategy creates powerful flywheel effects:

B2B → B2C: - Protocol integrations drive user discovery - "Powered by DecaFlow" builds brand trust - Integration volume improves AI models

B2C → B2B: - User adoption proves product-market fit - Trading data trains better AI models - User testimonials sell protocols

Success Formula: 1. Lock in 2-3 major protocol integrations (GMX, Camelot) 2. Scale B2C through those integrations + paid acquisition 3. Use data and case studies to sign more protocols 4. Repeat and compound

The goal isn't to be the biggest DEX. It's to be the essential privacy infrastructure layer that powers all of Arbitrum DeFi.

Next Actions (This Week)

B2B

1. [] Create partnership deck
2. [] Write outreach scripts

3. [] Identify decision makers at GMX, Camelot, Radiant
4. [] Schedule first 5 demo calls
5. [] Prepare demo environment

B2C

1. [] Launch Twitter content calendar
2. [] Create Discord server structure
3. [] Build MEV calculator tool
4. [] Set up analytics (Dune, Google Analytics)
5. [] Launch referral program

Foundation

1. [] Set up CRM (Notion, Airtable)
2. [] Create tracking dashboard for metrics
3. [] Weekly team sync on GTM execution
4. [] Monthly review of metrics vs targets

Let's build the privacy layer for Arbitrum DeFi. ☐
