Main Tweet

👋 Exciting update from the DecaFlow team:

We're evolving into Arbitrum's first AI-powered privacy infrastructure layer 🛡️

Here's what we've been building:

- 🔒 Privacy SDK - Enable MEV protection in any dApp with ~10 lines of code
- 🧠 AI MEV Prediction Engine - Real-time risk scoring & intelligent routing
- 📊 Public MEV Dashboard - Free analytics for the entire Arbitrum ecosystem

Why Arbitrum? The tech stack (Timeboost, lower fees, stronger ecosystem partnerships with GMX, Camelot, Radiant) aligns perfectly with our vision to build privacy-as-a-service infrastructure.

We're not just another DEX competing for liquidity - we're building the privacy layer that powers ALL DeFi protocols 🌐

Still multi-chain (Base, Optimism, Polygon support stays), but going deep on Arbitrum with ecosystem integrations and AI research.

More details coming soon 📅

Thread Option (if you want to expand):

👋 1/ Exciting update from the DecaFlow team:

We're evolving into Arbitrum's first AI-powered privacy infrastructure layer 🛡️

Here's what we've been building and why we're bullish on Arbitrum 🙌

2/ 🛠️ What We've Built:

▢ Privacy SDK - Enable MEV protection in any dApp with ~10 lines of code ▢ AI MEV Prediction Engine - Real-time risk scoring & intelligent routing ▢ Public MEV Dashboard - Free analytics for the entire ecosystem

All live, all open-source ⚡

3/ ▢ Why Arbitrum?

The tech stack and ecosystem are a perfect fit:

- Timeboost technology (unique MEV ordering)
- Strong DeFi ecosystem (GMX, Camelot, Radiant, Vertex)
- Lower fees = better for privacy routing
- Grant program supporting innovative infrastructure

4/ ▢ Our Vision:

We're NOT another DEX competing for liquidity.

We're building the privacy layer that POWERS all DeFi protocols.

Think: privacy-as-a-service infrastructure that any protocol can integrate.

5/ ▢ Still Multi-Chain

Base, Optimism, Polygon support remains fully operational.

But we're going DEEP on Arbitrum with: • Protocol integrations (GMX, Camelot, Radiant) • Timeboost research & integration • AI model training on Arbitrum data • Ecosystem public goods

6/ Check Out the MEV Dashboard

See exactly how much MEV is extracted across Arbitrum DeFi.

Free for everyone. No login required.

Track your own wallet's MEV exposure and see how much DecaFlow could save you 

[\[link to dashboard\]](#)

7/ For Developers

The Privacy SDK is live and documented.

Add MEV protection to your dApp in ~10 lines of code:

```
import { createPrivacyClient } from '@decaflow/privacy-sdk'
const privacy = createPrivacyClient({ network: 'arbitrum' })
await privacy.executeSwap(quote, signer)
```

Documentation: [\[link\]](#)

8/ What's Next?

- Live integrations with major Arbitrum protocols
- Enhanced AI model with 50M+ Arbitrum swaps training data
- Timeboost integration research
- Public API for MEV risk scoring
- Community-driven governance

More updates coming very soon 

Alternative Shorter Version (Single Tweet):

👉 DecaFlow Evolution:

We're now Arbitrum's first AI-powered privacy infrastructure layer 🍷

👉 Privacy SDK - MEV protection in ~10 lines of code 👉 AI MEV Engine - Real-time risk scoring 📊 Public MEV Dashboard - Free ecosystem analytics

Why Arbitrum? Timeboost tech + stronger DeFi ecosystem partnerships (GMX, Camelot, Radiant) = perfect fit for privacy infrastructure 👉

Still multi-chain, but going DEEP on Arbitrum 👉

More soon 👉

Key Points Covered:

👉 Announces new direction (Arbitrum-focused) without burning bridges 👉 Highlights new features (SDK, AI MEV, Dashboard) 👉 Explains the "why" (technical reasons, ecosystem fit) 👉 Clarifies positioning (infrastructure, not competitor) 👉 Reassures multi-chain support remains 👉 Creates excitement for future updates 👉 No explicit Base criticism or ecosystem hatred 👉 Forward-looking and positive tone

Recommended Approach:

I recommend the **Main Tweet** version - it's comprehensive but not too long, covers all key points, and maintains a positive tone without explicitly calling out Base or appearing divisive.

You can optionally expand it into the thread version if you want more detail and engagement opportunities.
