

DecaFlow ▶ Tychi Wallet Partner Integration Kit

Prepared for Tychi Wallet technical team — December 2025

1. Partnership Scope

DecaFlow will operate as Tychi Wallet's primary DeFi execution layer across three pillars:

1. **Multi-chain swaps** (smart routing via Uniswap V3 + Aerodrome) 2. **Liquidity pool management** (add/remove liquidity, position analytics) 3. **Cross-chain bridges** (quote + execution orchestration)

Tychi controls the end-user experience while DecaFlow supplies the routing logic, smart-contract layer, and infrastructure. This document contains the technical assets you need to begin integration.

2. Integration Options (Choose One)

Option	Description	Notes
A. Full API Integration	Tychi consumes DecaFlow REST APIs for swaps, liquidity, bridges.	Maximum UI control. Recommended for primary integration.
B. SDK Integration	Drop-in React/JS SDK that exposes pre-built hooks + components.	Uses the same APIs under the hood; customizable styling.
C. Embedded Suite	Secure iframe/WebView with white-label UI.	Fastest route; ideal for pilot/beta.

3. REST API Summary

Base URL (Production): <https://api.decaflow.xyz/v1> Base URL (Sandbox): <https://sandbox.decaflow.xyz/v1> Authentication: X-Partner-ID header (Tychi wallet partner key, issued after NDA/licence execution).

3.1 Swap Endpoints

Method	Endpoint	Purpose	Required Params
POST	/swap/quote	Returns best route + price impact.	fromToken, toToken, amount, chainId, slippage, walletAddress
POST	/swap/execute	Generates calldata + tx metadata.	quoteId, walletAddress

Sample Request:

POST /swap/quote

```
{
  "fromToken": "0xA0b86991c6218b36c1d19d4a2e9eb0ce3606eb48",
  "toToken": "0xC02aaA39b223FE8D0A0e5C4F27eAD9083C756Cc2",
```

```

"amount": "1000000",
"chainId": 8453,
"slippage": 0.5,
"walletAddress": "0xTychiUser..."
}

```

3.2 Liquidity Endpoints

Method	Endpoint	Notes
GET	/liquidity/pools?chainId=	Returns supported pools + metadata.
POST	/liquidity/add	Accepts pool ID, token amounts, deadlines.
POST	/liquidity/remove	Burns LP position, returns tokens.
GET	/liquidity/positions?wallet=	Lists user positions + APY.

3.3 Bridge Endpoints

Method	Endpoint	Purpose
POST	/bridge/quote	Available routes, arrival estimates, fees.
POST	/bridge/execute	Returns tx data for origin chain.
GET	/bridge/status/{trackingId}	Poll bridge state.

Full OpenAPI/Swagger spec is included in the partner package (JSON + HTML viewer).

4. SDK & Embedded Assets

- **SDK Package:** @decaflow/partner-sdk (npm) — provides React hooks (useSwapQuote, useBridgeQuote, etc.) and UI components.
- **Embedded URL:** <https://partners.decaflow.xyz/embed?partner=tychi>
 - Sandbox version: <https://partners-sandbox.decaflow.xyz/embed?partner=tychi>
 - Supports theme overrides via query params (theme=dark, accent=%23AA33FF).
- **PostMessage Events:** SWAP_SUBMITTED, SWAP_CONFIRMED, BRIDGE_REQUESTED, ERROR (payload documented in SDK guide).

Documentation PDF + code samples are bundled under /docs/partner-sdk/ in the attachment.

5. Smart Contract Addresses (Mainnet)

Chain	LiquidityRouter	Notes
Base (8453)	0x4b6D747Bc35CF3856e99C1C7B2e73C2687AB7DB4	Supports Uniswap V3 + Aerodrome
Arbitrum (42161)	0xDE8700785C7512a8397683A9BE9717B0aFdB18F3	Uniswap V3
Optimism (10)	0xA2fd81b7967e7FA7610DeBe1901A40686c48992	Uniswap V3
Polygon	0xFd05977256E8D5753728C78A3003BC3B75Fef1DD	Deployed Dec 2025

(137)

Avalanche (43114)	Pending (scheduled)	Endpoint ready once deployment confirmed
Ethereum (1)	Pending (scheduled)	Endpoint ready once deployment confirmed

ABI files (`LiquidityRouter.json`, `FeeRouter.json`) are included in `/abis/`.

6. Sandbox / Test Environment

Component	URL / Details
API Base	https://sandbox.decaflow.xyz/v1
Partner Dashboard	https://partners-sandbox.decaflow.xyz/dashboard
API Key Issuance	Provided once NDA/licence executed
Test Tokens	Faucet links provided for Base Goerli, Arbitrum Sepolia, Optimism Sepolia, Polygon Amoy
Monitoring	Grafana dashboards shared on request

Test Wallets: We can pre-fund Tychi-owned addresses with test assets for QA upon request.

7. Branding & Co-Marketing Guidelines

Only include assets needed on your side: * DecaFlow logomark (SVG + PNG, light/dark) — `/brand/decaflow-logo.zip` * Color palette + typography suggestions * “Powered by DecaFlow” badge (optional for swap UI)

Usage: Maintain 24px minimum clear space around logo; do not alter colors. Co-branded materials require mutual approval.

8. Support & Escalation

Purpose	Contact
Technical (API/SDK)	techpartners@decaflow.xyz
Smart Contract / Security	security@decaflow.xyz
Partnership / BD	partnerships@decaflow.xyz

Slack/Telegram shared channel will be created once integration agreement is signed. Response SLA: <4 business hours (critical), <1 business day (routine).

9. Licensing & Compliance

- **Mutual NDA:** Required before we issue production API keys or share non-public repos. We can sign Tychi’s standard NDA or provide ours.

- **Integration Licence:** Grants Tychi the right to embed DecaFlow services inside Tychi Wallet. Includes:
 - API usage terms
 - Security requirements
 - Branding/co-marketing rights
 - Revenue sharing (if applicable)
- **KYC/AML:** DecaFlow operates as non-custodial middleware; no user KYC required. Tychi remains responsible for end-user compliance per your jurisdiction.

Please provide your preferred legal contact so we can circulate the licence packet for signature.

10. Next Steps Checklist

1. Confirm preferred integration option (API / SDK / Embedded).
2. Execute NDA + integration license (DecaFlow Legal ↔ Tychi Legal).
3. Receive partner API key + sandbox credentials.
4. Begin integration (joint Slack channel + weekly standups).
5. Complete sandbox QA → production cutover.
6. Coordinate co-marketing launch.

We're ready to move as soon as you select the integration path and legal paperwork is complete. Reach out anytime if you need additional assets.
