

DecaFlow Partnership Deck

Prepared for: Bloomie

Date: December 2025

Version: 1.0

Table of Contents

1. Executive Summary
 2. The Problem & Our Solution
 3. Product Overview
 4. Technical Architecture
 5. Team & Background
 6. Security & Audits
 7. Roadmap
 8. Tokenomics
 9. Current Status
 10. Partnership Opportunity
-

Executive Summary

DecaFlow is the first privacy-focused cross-chain DEX aggregator built on Base, designed to solve the most critical problem in DeFi today: **complete lack of financial privacy**.

What We Do

- **Private Swaps:** Trade without exposing your wallet to front-running bots and copycats
- **Cross-Chain Bridging:** Seamless asset transfers across Base, Ethereum, Arbitrum, Polygon, Optimism, and Avalanche
- **Best Price Routing:** Aggregate liquidity from multiple DEXs to guarantee optimal prices
- **MEV Protection:** Shield your transactions from Maximum Extractable Value attacks

Why Now

- Privacy in DeFi is exploding as a narrative (Tornado Cash shutdown created a massive market gap)
- Base is the fastest-growing L2 with Coinbase backing
- Every trader faces this problem but current solutions are either compromised (Tornado), expensive, or non-existent
- We're solving a **real, painful problem** that affects every single DeFi user

Stage

- **Launch Phase:** Self-funded, no VC money (first VC round February 2026)
- **Technical Status:** 100% complete, deployed to mainnet on all chains
- **Go-to-Market:** Beta testing this week, official public launch in less than 2 weeks (mid-December 2025)

- **VC Round:** February 2026 (\$1-2M seed round)
-

The Problem & Our Solution

The Problem: Zero Privacy in DeFi

Every swap on Uniswap, SushiSwap, or any public DEX is **completely transparent**:

1. **Front-Running Bots** - Bots see your transaction in the mempool and jump ahead to profit from your trade
2. **Copy Trading** - Successful wallet strategies get copied instantly, destroying alpha
3. **Wallet Tracking** - Your entire financial history is public and traceable
4. **MEV Attacks** - Validators and searchers extract value from your transactions
5. **Competitive Disadvantage** - Institutions and whales track retail traders to exploit them

Real Impact: - Average trader loses 2-3% per swap to MEV and slippage - Large trades get sandwiched, losing 5-10%+ on execution - Portfolio strategies become worthless once discovered - No financial privacy = no protection from targeted attacks

Our Solution: Privacy + Performance

DecaFlow combines three critical innovations:

1. **Private Transaction Submission**
 - Routes trades through private mempools (Flashbots Protect, CoW Protocol)
 - Transactions invisible until confirmed on-chain
 - Zero front-running, zero sandwiching
2. **Cross-Chain Aggregation**
 - Single interface to trade across 6+ chains
 - Native USDC bridging via Circle's CCTP (Cross-Chain Transfer Protocol)
 - Generic token bridging via Chainlink CCIP
 - Fallback routing through Socket API for long-tail assets
3. **Best Price Routing**
 - Aggregates quotes from 0x, CoW Protocol, and internal pools
 - Automatically selects optimal route for every trade
 - Saves 0.5-2% compared to single-DEX trading

Result: Fastest, cheapest, most private way to trade on Base and beyond.

Product Overview

Core Features (v1.0 - Live Beta)

1. Swap Aggregator

- **Supported Chains:** Base (primary), Arbitrum, Optimism, Polygon
- **Token Support:** 10+ major tokens (ETH, WETH, USDC, USDT, ARB, WBTC, DAI, LINK, UNI)
- **Price Sources:** 0x API (aggregates Uniswap, SushiSwap, Curve, Balancer)

- **Features:**
 - Real-time quotes with 500ms debounce
 - Gas estimation
 - Slippage protection (0.5%, 1%, 3%, custom)
 - MAX button for full balance swaps
 - Transaction history with Basescan links

2. Privacy Mode

- **MEV Protection:** Routes through Flashbots Protect RPC
- **Intent-Based Trading:** Uses CoW Protocol for gasless, MEV-safe swaps
- **Private Mempool:** Transactions hidden until confirmation
- **No Front-Running:** Bots can't see or copy your trades
- **Toggleable:** Users choose privacy vs speed trade-off

3. Cross-Chain Bridge

- **CCTP (Circle):** Native USDC bridging - cheapest and fastest for stablecoins
- **CCIP (Chainlink):** Secure bridging for WETH, LINK, and other supported assets
- **Socket API:** Fallback aggregator for any token/chain combination (Hop, Across, Stargate)
- **Smart Routing:** Automatically selects best bridge based on token, chains, cost, and speed
- **Status Tracking:** Real-time bridge transaction monitoring with ETAs

4. Liquidity Pools (Coming in v1.2)

- Constant-product AMM pools for campaign tokens
- Create custom pools with configurable fees and TVL caps
- Add/remove liquidity with automatic LP token minting
- Fee revenue sharing for liquidity providers
- Conservative caps (\$10-25K initially) for risk management

5. Analytics Dashboard

- Total volume (24h, 7d, all-time)
- Unique swappers and transactions
- Top trading pairs by volume
- Fee revenue generated
- User portfolio view (swap history, LP positions, bridge status)

User Experience

Wallet Integration: - RainbowKit with multi-wallet support (MetaMask, Coinbase Wallet, Rainbow, WalletConnect) - One-click connect across all supported chains - Automatic network switching
 - Clear warnings when on wrong network

Design Philosophy: - Dark theme optimized for traders - Clean, minimal interface inspired by professional trading UIs - Mobile-responsive design - Fast loading with optimized bundle sizes - Real-time updates with no page refreshes

Technical Architecture

Frontend Stack

- **Framework:** React 19 + Vite + TypeScript
- **Styling:** Tailwind CSS V4
- **Wallet:** wagmi + viem + RainbowKit
- **State Management:** React hooks with optimistic updates
- **Deployment:** Vercel with CDN distribution

Smart Contracts

- **Chain:** Arbitrum (low fees, high speed, institutional backing)
- **Router Contracts:** MinimalFactory, MinimalPair, MinimalRouter
- **Pool Design:** Constant-product AMM ($x*y=k$) with:
 - Configurable fee tiers
 - TVL caps for risk management
 - Kill-switch for emergencies
 - Event-driven analytics
 - ERC-20 LP tokens

Integrations

Swap Aggregation: - **0x API:** Primary aggregator for best prices across Uniswap V2/V3, SushiSwap, Curve, Balancer - **CoW Protocol:** Intent-based swaps with MEV protection and gasless execution - **Fallback Logic:** Automatically switches if one aggregator fails

Privacy Layer: - **Flashbots Protect:** Private RPC endpoint for MEV protection on EVM chains - **CoW Protocol:** Batch auctions that eliminate front-running - **Private Submission:** Transactions bypass public mempool

Bridge Infrastructure: - **CCTP (Circle):** Burn-and-mint USDC across chains - native, secure, fast - **CCIP (Chainlink):** Generalized cross-chain messaging with DON security - **Socket API:** Meta-aggregator routing through 10+ bridge protocols

Infrastructure: - **RPC Providers:** Alchemy, Infura fallbacks for reliability - **Indexing:** The Graph for historical swap data (v1.2) - **Monitoring:** Sentry for error tracking, analytics for usage metrics - **Hosting:** Vercel with automatic deployments and CDN

Security Architecture

Non-Custodial Design: - Users maintain custody of assets at all times - No pooled funds, no central control - Smart contracts are execution-only (no admin keys for user funds)

Token Approval Safety: - Permit2 integration for universal approvals - Allowance checks before every swap - Clear UI warnings for approval transactions - Infinite approval warnings with “approve exact amount” option

Contract Security: - Pausable emergency functions - Role-based access control - Timelock on critical parameter changes - Conservative TVL caps on pools - Kill-switch for pool emergencies

Team & Background

Current Team

Founding Team (2 core members): - **Technical Background:** Experience in DeFi protocols, smart contract development, and cross-chain infrastructure - **Domain Expertise:** Deep understanding of DEX architecture, MEV, and privacy solutions - **Commitment:** 100% focused on DecaFlow, no other projects

Advisors & Partners

Technical Advisors: - Smart contract security experts (formal verification, audit experience) - MEV researchers and Flashbots contributors - DeFi protocol veterans (previous exits and launches)

Business Development: - Crypto KOL network for go-to-market - Connections to Base ecosystem teams - Partnerships with token projects for initial liquidity campaigns

Hiring Roadmap

Phase 1 (Q1 2025): - 1 Full-Stack Engineer (frontend + smart contracts) - 1 Community Manager (Discord, Twitter, content) - 1 Part-Time BD/Partnerships lead

Phase 2 (Q2 2025): - 1 Backend/Infrastructure Engineer (indexing, analytics) - 1 Security Engineer (monitoring, incident response) - 2-3 Ambassadors/KOLs for growth

Why We're Bootstrapped

Philosophy: - **Reputation > Money:** We want to prove product-market fit before raising VC - **Aligned Incentives:** Early partners and ambassadors get REAL upside, not just paychecks - **Agility:** No investor pressure, we move fast and iterate based on user feedback - **Community-First:** Building with users, not for investors

Path Forward: - Launching NOW with strong community foundation - Raise seed round (\$1-2M) in **February 2026** after proving \$5M-\$10M+ monthly volume - Keep token majority in community hands (70%+ to users, LPs, ambassadors) - Token launch Q2 2026 with founding ambassadors getting preferential allocation

Security & Audits

Current Security Status

Smart Contract Audits: - **Status:** Not yet audited (planned for Q1 2025 before mainnet pool launch) - **Scope:** MinimalFactory, MinimalPair, MinimalRouter, FeeRouter contracts - **Auditors:** Shortlisted firms: OpenZeppelin, ConsenSys Diligence, Trail of Bits - **Budget:** \$50-80K allocated for comprehensive audit - **Timeline:** 4-6 weeks audit period before mainnet pool deployment

Internal Security Measures: - Slither static analysis (no critical issues) - Mythril symbolic execution - Manual code review by experienced Solidity devs - Testnet deployment and extensive testing - Conservative TVL caps (\$10-25K per pool initially) - Emergency pause functionality - Timelock on admin functions

Operational Security: - Multi-sig treasury (Gnosis Safe 3/5) - Separate deployer and admin keys - Hardware wallet for all signing operations - No private keys in code or env files - Regular dependency audits - Incident response playbook

Third-Party Integration Security

Trusted Infrastructure: - **0x Protocol:** Battle-tested, \$150B+ volume, audited by OpenZeppelin - **CoW Protocol:** Audited by G0 Group, \$5B+ volume, trusted by Gnosis - **CCTP (Circle):** Native Circle protocol, institutional-grade security - **CCIP (Chainlink):** Secured by Chainlink DON, multi-layer validation - **Socket:** Aggregates only audited bridges, \$2B+ volume

Risk Mitigation: - All external calls wrapped in try-catch blocks - Fallback logic if external APIs fail - Rate limiting on quote fetches - Sanity checks on all external data (price, amounts, addresses) - No admin keys for user funds in any contract

Bug Bounty Program

Launch Plan (post-audit, pre-mainnet): - **Platform:** Immunefi - **Rewards:** - Critical: \$100K - \$500K - High: \$10K - \$50K - Medium: \$1K - \$10K - Low: \$100 - \$1K - **Scope:** All deployed smart contracts, frontend (XSS, phishing), infrastructure - **Duration:** Ongoing, increased rewards post-token launch

Compliance & Legal

Regulatory Posture: - **No US Users:** Geo-blocking + IP checks + attestation - **Non-Custodial:** Users maintain full control of assets - **No Investment Advice:** Clear disclaimers throughout UI - **No Securities:** Pure utility token (when launched) - **Sanctions Screening:** Blocked addresses list (OFAC, etc.)

Legal Counsel: - Retained crypto-specialized law firm for compliance review - Terms of Service and Privacy Policy drafted and reviewed - Jurisdiction analysis for token launch - Ongoing counsel on regulatory developments

Roadmap

Q4 2024 (COMPLETED)

- Market research and competitive analysis
- Technical architecture design
- Smart contract development (MinimalPool, FeeRouter)
- Frontend development and wallet integration
- 0x API integration for swap aggregation
- **MAINNET deployment** (Base, Arbitrum, Optimism, Polygon)
- Bridge integration (CCTP, CCIP, Socket)
- Privacy Mode implementation (Flashbots + CoW)
- Analytics dashboard
- Complete swap functionality with token approvals
- Slippage protection

December 2025 (CURRENT - LAUNCH MODE)

This Week (December 1-7): - **Beta Testing with Select Users** - Final bug fixes and optimizations - Ambassador program launch (Bloomie as founding ambassador!) - Community building (Discord, Twitter ramp-up) - Marketing materials finalization

Mid-December (Week of Dec 8-15): - **OFFICIAL PUBLIC LAUNCH** on all mainnets - Press releases and media outreach - Liquidity pools activation - Referral tracking system live (ambassador commissions active) - First token partnership campaigns - Target: \$100K-\$500K volume in first 2 weeks

Late December: - Scale marketing and community growth - Onboard additional ambassadors - Monitor performance and optimize - Collect user feedback for Q1 improvements

Q1 2026

January: - Limit Orders integration (0x RFQ, CoW conditional orders) - Advanced analytics (portfolio tracking, P&L, tax reports) - Mobile optimization and PWA launch - Community growth campaigns - Target: \$1M-\$5M monthly volume

February: - **FIRST VC ROUND** (\$1-2M seed raise) - Strategic partnerships with L2s and protocols - CEX listing discussions - Expand team (engineers, community manager, BD) - Target: \$5M-\$10M monthly volume

March: - Dollar-Cost Averaging (DCA) scheduled swaps - Additional chain expansion (Avalanche, BNB Chain) - Token launch preparation (legal, tokenomics finalization) - Bug bounty program launch - Target: \$10M-\$25M monthly volume

Q2 2026

April-June: - **Token Launch:** \$DECA governance token - Airdrop to early users, LPs, and ambassadors (Bloomie included!) - Staking for fee discounts and governance rights - DAO governance launch (proposals, voting, treasury) - Concentrated liquidity pools (Uniswap V3 style) - Target: \$25M-\$50M monthly volume

Q3 2026

July-September: - Native iOS and Android apps - Fiat on/ramp integration (MoonPay, Transak) - Advanced trading features (stop-loss, take-profit, alerts) - CEX listings (MEXC, Bybit, KuCoin) - LP Vaults for automated position management - Target: \$50M-\$100M monthly volume

Q4 2026

October-December: - Institutional API for algorithmic traders - Multi-sig vault support for DAOs and treasuries - Cross-chain intent aggregation - Privacy pools with zero-knowledge proofs - Target: \$100M-\$250M monthly volume

2027 and Beyond

Long-Term Vision: - Privacy pools with zero-knowledge proofs (zk-SNARKs) - True anonymous trading without revealing wallet addresses - Cross-chain intent aggregation (solve across all chains)

simultaneously) - MEV redistribution to users (capture and return MEV to traders) - Become the #1 privacy-focused DEX in crypto - \$500M+ monthly volume, top 10 DEX by TVL

Tokenomics

\$DECA Token Overview

Token Name: DecaFlow Token

Ticker: \$DECA

Standard: ERC-20 with voting capabilities (ERC20Votes)

Chain: Arbitrum (low fees, fast transactions)

Total Supply: 1,000,000,000 (1 billion DECA)

Launch: Q3 2025 (post-product validation)

Token Distribution

Allocation	Amount	%	Vesting	Purpose
Community & Airdrops	300M	30%	Linear 48 months	Early users, LPs, traders
Team & Advisors	200M	20%	12-month cliff, 36-month linear	Core team, advisors
Seed Investors	150M	15%	6-month cliff, 24-month linear	Early backers
Partners & Ambassadors	100M	10%	6-month cliff, 24-month linear	Bloomie's allocation here!
Treasury & DAO	150M	15%	Unlocked, DAO-governed	Protocol development, grants
Liquidity Provisions	100M	10%	Unlocked at launch	DEX liquidity, market making

Key Points: - **70% to community, users, and builders** (not VCs) - **Ambassadors get preferential allocation** from the 100M partner pool - **Linear vesting prevents dumps** and aligns long-term incentives - **DAO controls 15% treasury** for protocol evolution

Token Utility

1. Governance

- Vote on protocol upgrades and parameter changes
- Propose new features and partnerships
- Control treasury spending and grants
- Minimum 100K DECA (0.01%) to create proposals
- 4% quorum required for votes to pass

2. Staking for Fee Discounts

Stake \$DECA to reduce swap fees and earn protocol revenue:

Tier	Min Stake	Swap Fee Discount	APY (est.)
0	0 DECA	0%	0%
1	1,000 DECA (~\$100)	10%	10-15%
2	10,000 DECA (~\$1K)	25%	15-20%
3	50,000 DECA (~\$5K)	50%	20-25%
4	100,000 DECA (~\$10K)	75%	25-30%
5	500,000 DECA (~\$50K)	100% (free swaps!)	30-40%

Staking Rewards: - Paid in **USDC** from protocol swap fees - Distributed weekly based on staking share - No lock period (flexible staking) - Compound by restaking or withdraw anytime

3. Revenue Share

- Protocol collects 0.3% swap fee (industry standard)
- **80% of fees** go to DECA stakers
- **10% to treasury** for operations and development
- **10% to referrers/ambassadors** for bringing volume

Example Revenue Calculation: - \$10M monthly volume = \$30K in fees - \$24K to stakers (80%) - \$3K to treasury (10%) - \$3K to ambassadors (10%)

Bloomie's Potential: - Bring \$500K volume → earn \$1,500 in fees (30% referral share = \$450) - PLUS your staking rewards from holding DECA - PLUS token appreciation as protocol grows

Token Launch Strategy

Phase 1: Pre-Launch (Q1 2026) - Product live and generating real volume - Snapshot early users for airdrop eligibility (December 2025 - March 2026) - Finalize tokenomics and legal structure - Build liquidity partnerships for launch - Founding ambassadors locked in (Bloomie included!)

Phase 2: Public Sale (Q2 2026) - Community Pre-Sale: 5% of supply (50M DECA) at seed valuation - **Ambassador Allocation:** Founding ambassadors get preferred allocation - **Fair Launch:** No private pre-sale to VCs before community - **Initial DEX Offering (IDO):** Launch on Camelot (Arbitrum) or Aerodrome (Base) - **Timeline:** April-May 2026

Phase 3: Airdrop (Q2 2026) - Total Allocation: 50M DECA (5% of supply) - **Phase 1 (30M):** Early traders from December 2025 - March 2026 (higher allocations) - **Phase 2 (10M):** Liquidity providers - **Phase 3 (5M):** Active founding ambassadors (Bloomie as #1 ambassador!) - **Phase 4 (5M):** Community contributors (Discord, content, referrals) - **Claim Period:** 90 days, unclaimed returns to treasury

Phase 4: Liquidity & Exchange Listings (Q3 2026) - Launch Liquidity: \$500K-\$1M DECA/USDC on primary DEXs - **CEX Listings:** Target tier-2 CEXs (MEXC, Bybit, KuCoin) - **Multi-Chain:** Bridge to Base, Optimism, Polygon for ecosystem growth

Governance Structure

DecaFlowDAO: - On-chain governance using OpenZeppelin Governor - Timelock (2-day delay) for execution - Proposal threshold: 100K DECA (prevents spam) - Quorum: 4% of supply (40M DECA) - Voting period: 7 days - Execution delay: 2 days (security buffer)

What DAO Controls: - Protocol fee parameters (swap fee %, staking rewards %) - Staking tier thresholds and discounts - Treasury spending and grants - New pool creation and TVL caps - Partnership and integration decisions - Emergency pause and upgrades

Why This Matters for Ambassadors: - Founding ambassadors have governance tokens - Direct influence on protocol direction - Vote on ambassador program budget and structure - Truly decentralized, community-owned protocol

Current Status

LIVE ON MAINNET - LAUNCHING IN LESS THAN 2 WEEKS

Smart Contracts: 100% DEPLOYED TO MAINNET - MinimalFactory, MinimalPair, MinimalRouter **LIVE on all chains** - FeeRouter for commission tracking **LIVE and operational** - Deployed on: **Base, Arbitrum, Optimism, Polygon** - Tokenomics contracts ready (Token, Staking, Vesting, Airdrop, Governor) - Security audit scheduled post-launch

Frontend: 100% PRODUCTION READY - Swap aggregation fully functional (0x integration LIVE) - Wallet connection with RainbowKit (multi-chain support) - Token selector with real-time balances - Bridge integration complete (CCTP, CCIP, Socket all operational) - Privacy mode fully implemented (Flashbots + CoW Protocol) - Analytics dashboard with real data tracking - Mobile-responsive design fully tested - **Live URL:** [Will be public mid-December]

Infrastructure: 100% OPERATIONAL - Production deployment on Vercel with CDN - Multi-chain RPC providers (Alchemy, Infura) with failover - Monitoring and error tracking (Sentry) - Real-time analytics and metrics - Ambassador referral tracking system ready

Current Phase

THIS WEEK (December 1-7, 2025): - **Beta testing with select users on MAINNET** - Final QA and performance optimization - Ambassador onboarding (including Bloomie!) - Marketing and launch content preparation

MID-DECEMBER (Week of Dec 8-15): - **OFFICIAL PUBLIC LAUNCH** - All features live and publicly accessible - Ambassador program activated with referral tracking - First partnerships and liquidity campaigns

FEBRUARY 2026: - **First VC fundraising round** (\$1-2M seed) - Proven traction and volume metrics - Strategic partnerships established

Live Product

Production App: Operational on mainnet, public launch mid-December **Documentation:** docs.decaflow.xyz (launching with product) **Demo Access:** Available for beta testers and ambassadors NOW **GitHub:** Private repo, access available for technical due diligence

Partnership Opportunity

Why We Need Bloomie

- 1. Authentic Voice for Privacy** - You're a trader who understands the pain of front-running and MEV - You've experienced the problem firsthand - Your content resonates with our exact target audience - You have credibility in the DeFi community
- 2. Content Creation Skills** - Professional content writer with portfolio - Ability to explain complex DeFi concepts simply - Experience across Twitter, Medium, and other platforms - Consistent posting and community engagement
- 3. Ground Floor Opportunity** - You're not influencer #47, you're **THE FIRST** - Founding ambassador status carries massive credibility - As we scale, your early belief becomes legendary - Maximum upside potential (token allocation, revenue share, equity discussion)

What You Get

1. Performance-Based Revenue Share

Structure: - Custom referral link tracked to your wallet - Earn **25-30% of ALL swap fees** from users you bring - Fees paid **monthly in USDC** (real money, not promises) - **Recurring revenue:** Every time your referrals trade, you earn - **Unlimited upside:** No caps, no limits

Example Math: | Your Referral Volume | Protocol Fees (0.3%) | Your Cut (30%) | |-----
-----|-----|-----| | \$100K | \$300 | \$90 | | \$500K | \$1,500 | \$450 | | \$1M | \$3,000 | \$900 | | \$5M | \$15,000 | \$4,500 | | \$10M | \$30,000 | \$9,000 |

Volume Bonuses: - Hit \$100K → **\$200 bonus** - Hit \$500K → **\$500 bonus** - Hit \$1M → **\$1,000 bonus** - Hit \$5M → **\$5,000 bonus** - Hit \$10M → **\$10,000 bonus**

Realistic Scenario (3 months post-launch): - You onboard 100 active traders - Average trader does \$10K/month volume - Total: \$1M/month volume from your referrals - Your monthly earnings: **\$900 recurring** + bonuses - Annual run-rate: **\$10,800/year** (and growing as they trade more)

Best-Case Scenario (6 months post-launch): - You onboard 500 traders or 2-3 communities - Average volume: \$50K/month - Total: \$5M-\$10M/month volume - Your monthly earnings: **\$4,500-\$9,000 recurring** - Annual run-rate: **\$54K-\$108K/year**

2. Token Allocation (When We Launch)

Ambassador Pool: - 100M DECA allocated to Partners & Ambassadors (10% of supply) - Founding ambassadors get **preferential allocation** - Top performers get largest shares

Bloomie's Potential Allocation: - If you're our #1 ambassador: **5-10M DECA** (0.5-1% of supply!) - Vesting: 6-month cliff, 24-month linear (aligned long-term) - **Ground floor pricing** locked in

Potential Value: - If DECA launches at \$0.01: Your allocation = **\$50K-\$100K** - If DECA hits \$0.10 (realistic with traction): **\$500K-\$1M** - If DECA hits \$1.00 (bull case): **\$5M-\$10M**

PLUS Staking Rewards: - Stake your DECA to earn 15-30% APY in USDC - Example: 5M DECA staked = 75K-150K USDC/year in rewards - Compound or withdraw, your choice

3. Founding Ambassador Benefits

Status & Recognition: - Official “Founding Ambassador” title and badge - Featured prominently on our website and marketing - Exclusive interviews, AMAs, Twitter Spaces - VIP access to team, roadmap decisions, early features - Governance tokens (vote on protocol decisions)

Content Opportunities: - Co-create educational content (your byline, your brand) - Exclusive interviews with founders - Behind-the-scenes access to development - Early access to all new features for content creation - Cross-promotion with our official channels (we boost your content)

Community Role: - Lead ambassador community (hire/manage other ambassadors later) - Shape the ambassador program structure - Input on product features and UX - Direct line to founders for feedback and ideas

4. Full Creative Control

You Own Your Content: - Post on YOUR Twitter, YOUR Medium, YOUR channels - No one dictates what you write or how you say it - Build YOUR brand and following first - Content happens to mention/promote DecaFlow naturally

We Support You: - Provide talking points, data, graphics, and resources - Amplify your content through our channels - Connect you with other creators and communities - Compensate you fairly for your work and results

You’re Not “Working For Us” – You’re Building WITH Us

What We Ask

Launch Week (This Week - December 1-7):

If You Join NOW: - Get your referral link activated IMMEDIATELY - Beta test the product on mainnet before public launch - Create pre-launch content and build anticipation - Be THE founding ambassador from day 1 - Lock in your founding ambassador allocation for token launch

Time Commitment: 5-10 hours/week

Immediate Benefits: - Referral tracking starts from launch day (mid-December) - Volume bonuses apply from first dollar traded - Priority allocation secured for token launch (Q2 2026) - Featured prominently as founding ambassador

Month 1 (December 2025 - Launch Month):

Deliverables: - 5-10 tweets/threads about privacy in DeFi and DecaFlow during launch - 1-2 Medium articles timed with launch announcements - Share your referral link organically in your content - Join our Discord and help onboard early community

Compensation: - 25-30% revenue share on ALL volume you drive - \$200 bonus for hitting \$100K volume - \$500 bonus for hitting \$500K volume - Founding ambassador status (locked in for token allocation)

No Long-Term Commitment: - If it’s not working for you, walk away. No hard feelings. - If it’s working, let’s scale together in Month 2+

Month 2+ (January 2026 onwards):

If Launch Goes Well: - Increase content frequency (weekly threads, biweekly articles) - Participate in AMAs and Twitter Spaces - Build deeper relationships in the community - Help recruit other ambassadors - Input on product features and roadmap

Growing Compensation: - Continued revenue share (growing as volume grows exponentially post-launch) - Founding ambassador token allocation confirmed (5-10M DECA) - Potential for equity/advisor role when we raise VC round (Feb 2026) - Escalating bonus structure for major milestones

Why This Partnership Could Be Life-Changing

For You: - **Passive Income Stream:** Recurring revenue every month from your referrals - **Token Upside:** Ground floor allocation with 10-100x potential - **Brand Building:** Become THE voice for privacy in DeFi - **Career Equity:** Founding ambassador of a major protocol looks incredible - **Network:** Direct access to founders, VCs, and DeFi leaders

For Us: - **Authentic Marketing:** You're a real user who gets the problem - **Credibility:** Your reputation and expertise validate our solution - **Distribution:** Your audience is our exact target market - **Feedback:** Your insights help us build a better product - **Momentum:** Founding ambassadors create the initial flywheel for growth

For DeFi: - **Privacy Narrative:** We're solving a critical problem together - **Better Trading:** Your referrals get protection from MEV and front-running - **Community-Owned:** Ambassadors and users control the protocol, not VCs - **Innovation:** We're pushing the industry toward privacy by default

Next Steps - TIME SENSITIVE (Launching in Less Than 2 Weeks!)

1. URGENT: Review This Document (24-48 hours) - We're launching publicly mid-December (less than 2 weeks!) - Founding ambassador spots are limited (we want quality, not quantity) - Early decision = maximum upside and visibility - Request access to beta app for hands-on testing on MAINNET

2. Quick Call with Founders (This Week Preferred) - 30-minute call to meet the team - Walk through the LIVE product on mainnet - Discuss partnership structure in detail - Get your referral link set up before public launch - Answer any technical or business questions

3. Fast Decision Point (Ideally Before Launch) - If you're excited, let's draft a simple partnership agreement (1-2 days) - Define launch month goals, compensation, and success metrics - Provide you with referral link activated DAY 1 of public launch - Onboard you to Discord and internal channels immediately - Get you featured as founding ambassador in launch materials

4. Launch Together (Mid-December) - You're THE founding ambassador at launch - Start creating content timed with launch announcements - Share referral link from day 1 of public access - Track results in real-time and optimize together - Scale as we grow from \$0 to \$10M+ monthly volume

TIMING MATTERS: - Join THIS WEEK = Founding ambassador status + launch visibility - Join after launch = Still great opportunity but less "founding" credibility - Your referral link goes live with the public launch (mid-December)

Final Thoughts

Why DecaFlow Will Win

- 1. Real Problem** - Every DeFi user faces MEV, front-running, and privacy issues - Tornado Cash shutdown created a massive market void - Privacy is the next big narrative in crypto
- 2. Right Timing** - Base is exploding (Coinbase backing + low fees) - Privacy tech is maturing (Flashbots, CoW, zk-SNARKs) - Regulatory clarity emerging for privacy (non-mixing solutions)
- 3. Best Execution** - Technical team with deep DeFi experience - Privacy + performance (not just privacy) - Community-first approach (no VC control) - Agile and fast (bootstrap advantages)
- 4. Strong Network Effects** - More users → more liquidity → better prices → more users - Ambassadors bring communities → communities bring volume - Token staking aligns long-term incentives

Why You Should Bet On Us

We're Not Asking for Faith – We're Offering Proof: - Product is 100% built and LIVE ON MAINNET (not vaporware) - You can test it RIGHT NOW on Base, Arbitrum, Optimism, Polygon - Smart contracts deployed and operational (audit post-launch) - Tokenomics designed with community in mind (70% to community) - Launching publicly in LESS THAN 2 WEEKS - First VC round February 2026 (we're proving traction first)

We're Not Asking You to Work for Free: - Performance-based compensation (you win when we win) - Transparent tracking (blockchain doesn't lie) - Real revenue share in USDC (not just promises) - Token allocation secured for founding ambassadors

We're Asking You to Build WITH Us: - Ground floor opportunity (not late) - Shape the protocol and ambassador program - Own a piece of something potentially massive - Build your brand as THE privacy DeFi expert

Our Commitment to You

If you partner with us, we promise:

- 1. Transparency:** We'll share metrics, challenges, and wins openly
- 2. Fair Compensation:** You'll be paid what you're worth, on time, every time
- 3. Creative Freedom:** Your content, your voice, your brand
- 4. Long-Term Alignment:** Token vesting and revenue share align us for years
- 5. Respect:** Your feedback shapes the product and partnership

We're building something real. We want you to be part of it from day one.

Contact & Next Steps

Reach Out: - **Twitter:** @DecaFlowHQ (DM us) - **Email:** partnerships@decaflow.xyz - **Discord:** [Link upon interest] - **Calendar:** [Book a call with founders]

Materials Available Upon Request: - Testnet app access (NDA required) - Smart contract code review - Detailed tokenomics model - Financial projections - Partnership agreement draft

Questions to Consider: 1. Does the privacy problem resonate with you personally? 2. Do you believe Base is the right chain for DeFi growth? 3. Are you willing to bet on upside vs guaranteed flat fee? 4. Can you commit 5-10 hours/week for Month 1 test? 5. Do you see yourself as the face of privacy DeFi?

If YES to most of these, let's talk.

Thank you for your time and consideration, Bloomie. We truly believe you're the right person to help us build DecaFlow into the #1 privacy DEX in crypto.

Looking forward to hearing your thoughts.
