

DECAFLOW

Privacy Infrastructure for DeFi

Pre-Seed Round | January 2026

decaflow.xyz | [@decaflow](https://twitter.com/decaflow)

THE PROBLEM

DeFi users lose \$1B+ annually to MEV extraction.

Every swap, every trade, every transaction on public blockchains is visible. Bots front-run, sandwich, and extract value from ordinary users.

- **\$1.38B** extracted via MEV in 2024 alone
- **68%** of DeFi users have experienced front-running
- **\$0** current solutions that work at the protocol level

Existing "solutions" are band-aids:

- Private mempools only delay the problem
- MEV rebate programs return pennies on the dollar
- Wallet-level protection doesn't scale

Users shouldn't need a PhD in MEV to swap tokens safely.

THE SOLUTION

DecaFlow: Protocol-level privacy that just works.

We've built the first privacy-native DEX aggregator with MEV protection baked into the architecture—not bolted on as an afterthought.

How it works:

1. User initiates swap on DecaFlow
2. Our privacy routing fragments and obscures the transaction
3. DLMM pools execute with concentrated liquidity efficiency
4. MEV protection ensures fair execution price
5. User receives tokens—no front-running, no sandwich attacks

The result: DeFi that protects users by default.

WHAT WE'VE BUILT

Live on Arbitrum Mainnet since December 20, 2025

Metric	Status
Mainnet Launch	December 20, 2025
Total Swaps	38
Total Volume	\$293
Security Incidents	0
Uptime	100%
Chains Supported	6

Core Integrations:

- **Chainlink CCIP** — Cross-chain messaging and price feeds
- **CoW Protocol** — MEV-resistant order execution
- **Circle USDC** — Compliant stablecoin infrastructure
- **Custom DLMM Pools** — Capital-efficient concentrated liquidity

THE PRODUCT

Two Revenue Channels:

1. Consumer DEX (decaflow.xyz)

- Privacy-first token swaps • MEV protection on every trade • Cross-chain support via Chainlink CCIP • Gamified onboarding (Pioneer 100 program)

2. Privacy SDK (B2B)

- Any protocol can integrate privacy in 5 lines of code • White-label MEV protection • API-first architecture • Enterprise dashboard for partners

Privacy-as-a-Service for the entire DeFi ecosystem.

BUSINESS MODEL

Transaction Fees + B2B SaaS Revenue

Revenue Stream	Fee Structure	Target
Consumer Swaps	0.3% per tx	Retail users
SDK Free Tier	0.3% ($\leq 1K$ swaps)	Small protocols
SDK Premium	\$500/mo + 0.1%	Mid-size protocols
SDK Enterprise	Custom	Large protocols

Unit Economics:

• \$10M monthly partner volume = \$10K-\$30K revenue • 10 B2B customers at \$5K/month = \$50K MRR • Path to \$1M ARR with <\$100M total volume

Why B2B wins: Protocols have budget, users have friction. One integration = thousands of protected users. SaaS metrics VCs understand.

MARKET OPPORTUNITY

\$130B DEX market. \$0 privacy-native infrastructure.

Market	Size	Our Position
DEX Volume (2025)	\$130B+ monthly	Privacy layer
MEV Extraction	\$1.4B+ annual	Protection infra
DeFi Infra TAM	\$50B+	SDK/API play

Why now:

1. Regulatory pressure — Privacy becoming compliance requirement 2. Institutional entry — Funds need MEV protection for large trades 3. User awareness — MEV is mainstream knowledge now 4. Infrastructure maturity — Chainlink, CoW, Circle enable our stack

COMPETITIVE LANDSCAPE

Protocol	MEV Protection	Privacy	Live	B2B SDK
Uniswap	✗	✗	✓	✗
1inch	Partial	✗	✓	✗
CoW Swap	✓	✗	✓	✗
DecaFlow	✓	✓	✓	✓

Our moat:

1. Technical — DLMM + privacy routing combination is novel 2. Integrations — Chainlink, CoW, Circle partnerships 3. Positioning — Infrastructure layer, not another DEX 4. B2B focus — Revenue model that scales without CAC

We're not competing with Uniswap. We're the layer Uniswap integrates.

TRACTION & MILESTONES

What we've achieved (Pre-funding):

✓ Mainnet launch on Arbitrum (Dec 2025)
 ✓ 38 real transactions processed
 ✓ Zero security incidents
 ✓ Chainlink CCIP integration live
 ✓ CoW Protocol integration live
 ✓ Circle USDC support
 ✓ Privacy SDK architecture complete
 ✓ 6-chain support ready

Next 6 months (Post-funding):

Milestone	Target	Timeline
Monthly Volume	\$100K	Month 2
SDK Beta Partners	5 protocols	Month 3
Security Audit	Complete	Month 3
B2B MRR	\$15K	Month 5
Monthly Volume	\$1M+	Month 6

TEAM

Samuel [Last Name]

Founder & CEO

- [Your background - technical/crypto experience] • [Previous roles/companies] • [Relevant achievements]

[Co-founder if applicable]

[Role]

- [Background] • [Experience]

Why us:

- Shipped mainnet product with \$0 budget • Technical depth in privacy + DeFi • Understand both B2C and B2B crypto

THE ASK

Raising: \$500,000 Pre-Seed

Valuation: \$2M cap | Structure: SAFE or priced round

Use of Funds:

Category	Allocation	Purpose
Engineering	50% (\$250K)	SDK, security, infra
Security Audit	15% (\$75K)	CertiK/Trail of Bits
BD & Partnerships	20% (\$100K)	B2B sales, integrations
Operations	15% (\$75K)	Legal, infra, runway

Runway: 18 months

Target Outcomes:

• \$1M+ monthly volume • 5-10 B2B SDK customers • \$50K+ MRR • Seed-fundable metrics (\$3-5M raise)

LET'S BUILD
