

DecaFlow × HOST WEB3 COMMUNITY™ (@Hostweb3hub) — Partnership Research + Monetization Strategy + DMs

Prepared for: DecaFlow (decaflow.xyz)

Date: 2025-12-21

0) What I could verify quickly

X profile details visible from your screenshot:

- Name: **HOST WEB3 COMMUNITY™** (verified)
- Handle: **@Hostweb3hub**
- Bio: “A global Web3 community for contributors, jobbers & builders – learn, earn & expand your global network”
- Category: Financial Services
- Joined: May 2025
- Followers shown: **10.3K**
- Pinned post: “A whopping \$1,000 CREATORS CAMPAIGN HOSTED BY @Hostbounties” (shows they already run **paid/sponsored activations**)

Notes:

- X blocks reliable non-logged-in scraping, and open-web search didn't surface a public Telegram link. Strategy below assumes they indeed have a large TG community (as you stated) and designs offers that are attractive even without exact member counts.

1) What HOST is (positioning)

Community type: builder-focused Web3 community with a “learn + earn” vibe.

Likely audience:

- retail crypto users (onboarding, tasks, giveaways)
- builders (devs, designers, community managers)
- “contributors/jobbers” looking for bounties, paid tasks, gigs

What they sell (implied by pinned creators campaign):

- distribution (X + TG blasts)
- campaigns (creator contests, bounties, challenges)
- sponsorship placements (pinned posts, AMAs, content)

What they can become for DecaFlow:

- a distribution partner that can deliver measurable user acquisition and volume
 - a “trust layer” (community endorsement)
 - a recurring campaign engine (monthly/bi-weekly activations)
-

2) DecaFlow goals (what we want from HOST)

Primary:

- 1) **Visibility**: high-frequency awareness across X + TG
- 2) **Acceptance/credibility**: social proof + community endorsement
- 3) **Liquidity & volume**: swaps, bridges, and ideally LP actions

Secondary:

- feedback loop: power users testing flows
 - “always-on” funnel: continuous referrals from pinned TG posts
-

3) HOST goals (what THEY want) — monetary first

Given your note that the founder prioritizes monetary upside, the offer should be:

- **guaranteed base payout** (so it's real, immediate)
- **plus performance upside** (so it can scale)
- **plus recurring revenue** (monthly retainer option)

We should avoid vague “exposure” benefits. We should offer **cashflow + dashboard + clear payout terms**.

4) Partnership offers that “print money” for HOST (creative + concrete)

Below are structures you can propose (pick 1–2 to start; keep the rest as options).

Offer A — Paid Sponsorship + Performance Bonus (simple, founder-friendly)

HOST delivers:

- X: 1 announcement post + 1 follow-up post + 1 long-form educational tweet OR thread
- TG: 1 pinned message for 7–14 days + 2 broadcast reminders
- 1 live session (X Space or TG voice AMA)

DecaFlow pays:

- **Base fee** (upfront) + **bonus** tied to outcomes

Bonus options:

- CPA per verified wallet that completes a first swap
- bonus per \$ volume bucket (e.g., each \$50k / \$100k incremental volume)

Why it works:

- guaranteed money satisfies founder
- DecaFlow only pays extra when results happen

Offer B — Affiliate Rev-Share on Fees (the “forever” money model)

HOST gets:

- **% of protocol revenue** attributable to their referrals for a fixed window (e.g., 60–90 days)

Implementation:

- unique referral code / UTM

- post-swap attribution in analytics
- weekly payout in USDC

Why it works:

- scalable recurring income without them doing more work
- founder sees a compounding upside

Offer C — “Community Code” + Fee-Split (gamified + trackable)

- Create code like **HOST** that gives users a small fee discount or cashback.
- Split the remaining fee between DecaFlow and HOST.

Why it works:

- HOST can brag about an exclusive community perk
- founder gets measurable revenue per transaction

Offer D — Co-branded Trading Challenge (prize pool funded, but engineered for ROI)

HOST runs a 7-day “Swap & Win”:

- tasks: complete 1+ swap; optional: bridge; optional: provide liquidity
- leaderboard by points (volume-weighted + anti-sybil checks)

DecaFlow funds:

- prize pool (USDC) + HOST management fee

HOST earns:

- fixed campaign management fee + optional % of prize pool as fee
- potential sponsor bundle: HOST upsells other sponsors into the event (and keeps margin)

Why it works:

- aligns with their creator-campaign history
- founder can monetize the “event production”

Offer E — “Bounties for Builders” (maps perfectly to their positioning)

HOST runs weekly micro-bounties:

- create a tutorial video
- write a “how to bridge privately” guide
- translate DecaFlow guides
- bug reports / UX feedback

DecaFlow funds:

- bounty pool + HOST admin fee

Why it works:

- makes HOST look like it delivers paid work to community
- high-quality UGC content for DecaFlow

5) What DecaFlow gets (must be explicit)

We need deliverables and measurement.

What we want from HOST

- distribution across X + TG
- pinned placement (TG) for a minimum period
- at least 1 “education” content piece (not just shill)
- 1 live touchpoint (Space/AMA)

What success looks like (trackable KPIs)

Pick 3 and measure weekly:

- new unique wallets initiated swaps
 - first-swap conversion rate (click → swap)
 - swap volume attributable to HOST
 - number of users returning for a 2nd swap within 14 days
 - liquidity actions (optional)
-

6) Measurement & anti-gaming (important if paying performance)

If paying per user/volume, add guardrails:

- qualify only “first-time DecaFlow wallet” conversions
- require minimum swap size to count (e.g., \$10–\$20)
- cap CPA payouts per day/week to avoid bot spikes
- exclude wash trading patterns (volume-only incentives can be gamed)

Attribution methods:

- UTM links for web analytics
- referral code stored client-side and passed into swap execution
- optional: signed message to bind referral at first connection

Payout cadence:

- weekly payout in USDC on Base (fast, cheap)
-

7) Recommended package to pitch first (best balance)

Start with **Offer A + Offer B**:

- **Base sponsorship fee** to satisfy founder immediately
- **Rev-share** for upside that makes them prioritize DecaFlow long-term

This is usually the easiest “yes” while still protecting DecaFlow.

Suggested structure (fill with numbers you’re comfortable with):

- upfront: \$_ (**campaign sponsorship**)
 - **CPA: \$ per first swap (qualified)**
 - **rev-share: % of fees for 60–90 days**
 - **optional kicker: +\$** if volume passes \$_
-

8) Creative angles that will resonate with HOST’s audience

Use their “contributors/jobbers/builders” angle:

- “Get paid to learn DeFi: weekly bounties + rewards”

- “Cross-chain swaps with MEV protection” (safety)
 - “Base-native swaps + privacy mode”
 - “Builders week: content bounty + dev bounty”
-

9) Personalized DMs (3 options)

Important: you know the founders personally, so keep tone warm but still businesslike. Don't mention “you love money”; show it through structure.

DM Option 1 — Direct partnership with guaranteed money + upside (recommended)

Hi [Name] — hope you're good.

I'm launching DecaFlow (decaflow.xyz): privacy-first cross-chain swaps on Base (multi-chain support, MEV protection).

I want to partner with HOST in a way that's immediately monetizable for you and measurable for us.

Proposal:

- Upfront campaign sponsorship fee: \$__
- **Plus performance: \$ per qualified first-swap user (min \$__ swap)**
- *Plus rev-share: __% of DecaFlow fees from HOST referrals for 90 days*

Deliverables on your side:

- 2 X posts + 1 educational long-form post
- 1 TG pinned post for 14 days + 2 reminders
- 1 live Space/AMA

If you're open, I can share a 1-page brief and we can lock dates this week.

DM Option 2 — Community code (easy to understand, “exclusive”)

Hi [Name], quick one.

Let's set up a **HOST community code** on DecaFlow that gives your members a perk (discount/cashback), and we split fees on every swap driven by HOST.

I'll also sponsor a launch week:

- 1 Space/AMA
- TG pinned message
- 2 X posts

You get guaranteed sponsorship + ongoing revenue per transaction.

Want me to propose numbers and a 7-day rollout plan?

DM Option 3 — Co-branded “Creators + Traders” campaign (matches their pinned campaign vibe)

Hi [Name] — saw HOST's creator campaign positioning. I want to do a co-branded campaign with DecaFlow.

Concept: “HOST × DecaFlow: Swap & Create Week”

- traders: complete swaps to earn rewards
- creators: publish tutorials/content and earn bounties

We fund a prize/bounty pool + pay HOST a management fee, and we add performance bonuses for volume/users.

If you like it, I'll send a full campaign blueprint + budget ranges.

10) Short follow-up (48–72h)

Hey [Name] — following up.

I can make this easy:

Option A) \$ _ **sponsorship** + \$ *per qualified user* + _ % fee share (90 days)

Option B) monthly retainer for ongoing promos + fee share

Tell me which structure you prefer and I'll send dates + creatives.

11) What I need from you (to finalize numbers)

Reply with:

- 1) Their **TG member count** + average views per broadcast
 - 2) Typical pricing for: TG pin, X post, Space/AMA
 - 3) Whether they can run a leaderboard/quest format
 - 4) Your preferred budget range (low/med/high) for first campaign
-

12) Immediate next step

If you approve, I'll:

- finalize 1 offer (A+B),
- set a 7–14 day campaign calendar,
- produce a short landing page copy + tracking links,
- and prep payout + attribution so reporting is clean.
